

The Nocturne

BASS BRAIN PRE*AMP

“ how to do it ” :

(go to page 3 if you like pictures instead)

I put a Gain knob called “GRITCH” on the box. Its like the -35db to -50db switch position on the re-301 fx box input, or it tapers through that range. It functions from roughly the **9 O'clock** (unity gain) to the **5 O'clock** >>

START with the Gain- gritsch knob at **9 oclock**. This should give you unity gain when the pedal is switched on and off. You might notice a slightly fatter tone but at **9-ish o'clock** on the nocturne pedal is where the Unit's unity gain is set. anything before that is attenuated and (hisses somewhat until the guitar signal comes through) .

You need to plug the instrument straight into the right side of the Nocturne pedal **FIRST in the chain if electric and right after a piezo pre if your Acoustic/Upright bass is not using electromagnetic pickups and rather piezo passive.**

Now, when you go from 11 o'clock to 2 o'clock.. this is the sweet spot

Gain control
Works from
9-5 o'clock only,
9 o'clock is unity
gain and **2-3 o'clock**
is the SWEET spot,
5 o'clock will kick
the amp into full tilt
gritschy-ness

INPUT jack
Be sure to push your
cables in all the way,
this jack clicks in
twice.

Treble cut- when
the pedal is first
powered up
(voltage plugged
in) –there will be a
few seconds of
silence as the
pedal charges up
its capacitors.. but
will be ready to go
after that
initializing.

Heavy duty **9v power**
input (-) tip, standard
high quality audio
boss PSA style
adaptor only!!!!
*Note: Using a non
regulated non audio
quality 9 volt (-) tip
2.1mm power adaptor
will void the one yr
warrantee (original
owner only)*

True Bypass -Stomp
Switch keeps your signal
clean ON or OFF

Internal 9v battery clip (atomic
uses 9V (-) tip power supply
only).

your pedal uses audio quality alpha pots, silver mica
& xicon caps throughout, xicon metal & carbon film
resistors, and an EH 3PDT stomp switch. **Do not swap**
out the Texas instruments Op-amp chip!!
