- **Tap** the **Unlock Button** and the **Red LED** light will blink and then return to a solid **Red LED** indicating a picture has been taken and the device has returned to **standby mode**

How to Playback files on a PC:
- Either Connect the USB cable to the device and the other end to the USB port of the computer or Remove the Micro SD card from the device and connect it to the computer
- When connected, the PC will recognize the device as a removable disk
- Open the **DCIM** folder
- Open the **100DSCIM** folder
- Double Click to play

NOTE:
In order to playback the files on these devices you will need to download a media player that can play .AVI format. We recommend VLC media player

How to Playback files on a MAC:

- Either Connect USB cable to the device and the other end to the USB port of the computer or Remove the Micro SD card from the device and connect it to the computer
- When connected the PC will recognize the device as a removable disk
- Open the **DCIM** folder
- Open the **100DSCIM** folder
- Double Click to play

NOTE:

In order to playback the files on these devices you will need to download a media player that can play .AVI format. We recommend VLC media player

How to Playback files on a Google ChromeBook:
- Connect the device to the USB port of the ChromeBook
- A pop up menu may occur, if so select "View Files"
- If a pop up does not occur, select the **O icon** (called the app launcher) "similar to a windows icon button" located in the bottom left corner of the screen
- Underneath the Google Drive are My Drive, Downloads, New Services, and something else that may be named "REMOVABLE DRIVE"
- Select the Removable Drive. If unsure of this step. Disconnect the device from the Chrome Book and see what is no longer available under the Google Drive from Step 4
- After selecting the Removable drive you can now navigate the folders in the main folder to find the recorded files.
- Double Click to play

NOTE:

In order to playback the files on these devices you will need to download an APP that can play .AVI format. We recommend VLC media player, available for free at the GOOGLE PLAY STORE

How to Playback files on an Android Smartphone or Tablet(No Apple Products):
- An **OTG Cable** is required for this process.
- Go to your Device Storage and look for the External Memory. Inside will be all your files that you can click on in order to review what was captured.
- For all other steps refer to the **OTG cable guide** on **spycentre.com**
  OTG Cable Sold Separately. Purchase one on our website for $19.99 Part #4159

NOTE:

In order to playback the files on these devices you will need to download an APP that can play .AVI format. We recommend VLC media player, available for free at the GOOGLE PLAY STORE

How to Delete the files on a PC:

- Open the **DCIM** folder
- Open the **100DSCIM** folder
- Right Click on the file you wish to delete and Left click Delete in the pop up menu.

How to Delete the files on a MAC:

- Open the **DCIM** folder
- Open the **100DSCIM** folder
- Click and DRAG the file you wish to delete to the Trash Bin
- Empty the Trash Bin to permanently delete the file from the device.

Note: If the above step is not completed the files will not be fully deleted from the device and you will have a phantom folder that will contain the deleted files that can only be seen by a Windows Computer

How to Set the TIME and DATE on a PC:

- Connect the USB cable to the device and the other end to the USB port of the computer
- When connected the PC will recognize the device as a removable disk
- **Create a plain text file** next to the **DCIM** folder
- Right click with the mouse underneath that folder to open the Actions menu, move the mouse over NEW and choose Text Document ".txt" file
- Open that file and input the date in Year/Month/Day format and the time in 24 Hour format
  Example: 04/15/2020 at 1:30pm would be 2020.04.15 13:30:00
- Save the file as**Time**
- Now in the folder should be a **DCIM** folder and **Time.txt** file
- Disconnect the device from the computer and immediately create a new recording to import the corrected time and date stamp
- When the device is connected again to the computer the Time file should no longer be present indicating the device has accepted the new time and date

How to Set the TIME and DATE on a MAC:

- Connect the USB cable to the device and the other end to the USB port of the computer
- When connected the PC will recognize the device as a removable disk
- Open TextEdit
- Create a NEW Plain Text file
- Input the date in Year/Month/Day format and the time in 24 Hour format
  Example: 2020.04.15 13:30:00 would be 04/15/2020 at 1:30pm
- Save the file as **Time**
- Now move the time file into the folder with the **DCIM** folder
- In the folder should now be **DCIM** folder and the **Time** file
- Safely eject the device from the computer and create a new recording to import the corrected time and date stamp
- When the device is connected again to the computer the time file should no longer be present indicating the device has accepted the new time and date

Specifications:

- MAX Memory capacity: 64GB
- Recording format: .AVI
- Video recording resolution quality: 1080p @ 30fps
- Video recordings are in 15 minute intervals
- Motion activated video recordings are in 3 minute intervals
- Picture resolution: 5MP
- Battery power consumption time with full charge: @1 Hour 45 Minutes
- Recording Consumption per Hr: 7.6GB
- Video Recording capacity:
- 16GB = 1.5Hr
- 32GB = 3Hr
- 64GB = 6Hr

VLC Media Player (Recommended for optimal usage)
How to Download VLC media (Mac)
- Go to www.videolan.org
- Click the "Download VLC"
- It will open a new window and begin downloading
- If it does not automatically begin downloading, press the Click here and select one of the mirrored sites
- Once completed a new file named VLC will be visible on the desktop
- Open the folder and in the folder move the VLC to the applications folder by drag and dropping it
- Once in the application folder the VLC player will complete the installation
- Open VLC media player in the Applications folder and simply drag your video files to the "drag here" dialog box to open and play
- If the VLC player is not installing a change to the Security and Privacy settings is needed
- To access your Security and Privacy click on the Apple Icon on the task bar and select "System preferences"
- Select "Security and Privacy"
- Make sure the Lock icon on the bottom of the screen is open and set to Make Changes
- Select the button "Open Anyways"
- VLC will now fully install

How to Download and use VLC media (Windows)
- Go to www.videolan.org
- Click the "Download VLC"
- It will open a new window and begin downloading
- If it does not automatically begin downloading, press the Click here and select one of the mirrored sites
- Once downloading has completed select Run and install
- Once finished a VLC icon will now be available on your PC
- To default open a file in VLC media player, right click on the file you wish to open and select "Open with" and choose VLC
- To change all files to default open with VLC media player: Right click and choose properties then click on the "Change" button next to "O-pen with" and change it to VLC and press OK. Now the files will default open with VLC

NOTE: If a folder does not automatically open when connected to PC, disconnect the device and perform the following

1. Open Control Panel by typing "control panel" in the Search bar
2. Select Programs
3. Under Default Programs, Click "Change default settings for media or devices"
4. Under Removable Devices, select "Open folder to view files"
5. Save
6. Reconnect the device to the PC
