

STORE IN FRIDGE

This product is entirely natural and is best to
keep it in the fridge

Lotion is Grey & Violet in colour. Goes on clear.

Instructions on next page.

Bahama Brown (BB) is different to any product you've ever used before. Please take note of the following information before you begin, **read it entirely** – Welcome to the family, Team BahamaBrown.

BEFORE YOU BEGIN, WHAT YOU NEED TO KNOW:

Bahama Brown (BB) is created using our proprietary technology called Multi-Pathway Skin Activation™. This new technology allows us to work with your skin in ways that were previously not possible.

Imagine for a moment, more than 26 doctors, all at the same time, working with your skin to produce the results you want. We've all been impressed by the results and we're quite certain you will be too.

- The Superfood Tan is the latest release from Bahama Brown. It is a Grey/Violet lotion. You'll notice a grey protective layer on top it's used as a final layer to seal the lotion and keep it fresh -- the lower portion of lotion is violet (from Grape Skin, Blackberry and Raspberry Extracts).** When you open your jar for the first time we recommend you pull back the protective layer with a small spoon. Use violet lotion to create tan.
- BB contains approx. 3x the active tanning power of most off the shelf products. Go easy. Go gradual. Remain in control of your tan and you'll spend days hearing friends tell you how natural & amazing your tan looks.
- DO NOT USE A MITT.** Use thin rubber nitrile gloves or bare hands just remember to wash and dry hands thoroughly during and immediately after application.
- If you're doing armpits, **PLEASE** ensure you wash off **ALL** antiperspirant deodorant. This lotion contains blackberries and it can bind to deodorant. Don't be that person.
- BB goes on to become clear on skin and activates your skin's own tan producing process in 3 stages. Stage 1 & 2 activate within 4 to 8 hours. Stage 3 activates for up to 3 days producing a **REAL TAN** that lasts up to 6 to 10 days.
- You only require a very SMALL AMOUNT of lotion.** Massage a thin coat deeply into skin. Allow 1 or 2 minutes for skin to naturally absorb lotion.
- The colour you become by using BB is the colour produced by your skin. **This is not a fake tan &, it is not skin paint.** The tan is real and made by your skin as it would naturally when sunbathing only without the dangers of UV. **It will not rub off on clothing, bras, bed sheets or your wedding dress.**
- By massaging BB evenly deeply into skin, it cannot be blotchy, sticky or streaky. If you notice an area of skin has been missed, that's ok, just apply some lotion on that spot and you'll be just fine.
- A consistent usage regime maintained with weekly top-up will ensure your tan is always perfect.
- For an entirely natural looking tan, be patient! only apply 1 coat on day 1 and if you prefer, apply another coat on day 2. If you really want a darker tan, then apply another coat on day 3. Each application will smell great, go on real smooth and is super moisturising. Heavier coats produce darker colour however light coats are better and easier to manage.
- Each coat of BB continues to develop for up to 3 days.** It's entirely safe to use as much BB as you like however to maintain best colour apply light coats. Of course, you know your skin best and will adapt these instructions to best suit you. Your skin is unique to you and your results will also be unique to you.
- For even colour across contoured or gathered skin e.g. face and skin around joints (fingers, elbow, knee, feet etc), apply light even coat with wet hands.
- Wet any skin with heavy hair to make lotion more spreadable.
- Be sure to wash any area of skin (hands & palms) immediately to avoid tanning skin that shouldn't be tanned. Best to use thin Nitrile rubber gloves. Ideally, wash hands after covering each section of your body. For example: apply to legs, wash hands...then apply to upper body and wash hands again.**
- You should be able to wear loose clothing right away. For tight clothing best to allow a few minutes before dressing and always check you haven't left excess lotion on skin.
- If you apply BB in the evening, be sure to wait 2 hours before going to bed, this will prevent staining sheets with Superfoods. From the moment your tan is visible, it will not stain fabric or rub off. Maintain a regular skin cleanse routine to exfoliate and remove dead skin.
- For best results, allow BB to work its magic for more than 4 hours before washing. (leave on skin for at least 2 hrs). It's made with wonderful medicinal ingredients, feel free to apply and just leave it on till your next shower. It's good for you.
- Each 50ml jar will provide approx. 5 full body tan sessions (applied to average sized female body). Use wet hands/glove to get even more sessions from each jar.
- BB is Vegan and made with **natural & organic** ingredients. **Please KEEP IT IN THE FRIDGE.**
- BB contains 26 plant derived Superfoods for skin. It's super moisturising, pregnancy & child safe (listen up Dance Mum's).
- BB meets NATRUE.org and ECOCERT certification criteria for select ingredients.
- BB does not contain nasty chemicals, paints or stains like those commonly found in fake-tan/spray-tan products. The tan you'll see is all YOU, produced by your own skin, perfect & totally natural every time.
- BB is suitable for all skin type.

USAGE INSTRUCTIONS:

Note: Even though BB is entirely a safe vegan lotion, it's always smart to do a patch test prior to applying all over. Apply a small amount on skin to cover 10cm area. When observed results are great, then apply to rest of body.

1. Shower, shave and exfoliate to remove built-up dead skin.
2. If you do armpits ensure you wash away **ALL** antiperspirant deodorant. (otherwise it will bind with blackberry)
3. **DON'T USE A MITT, IT'S NOT SUITABLE FOR BB.** Wear Rubber (Nitrile) Gloves. **If using bare hands, wash and dry hands during and after applying lotion.**
4. Mix in or remove the protective grey layer of lotion to expose violet lotion beneath. Use violet lotion for tanning.
5. Apply a small amount of lotion and massage **deeply** into each section of skin you want to cover. Apply to one section of body at a time. Example – if using bare hands, do one leg, then the other leg (wash hands), then do arms (wash) then torso (wash), neck & face (wash). A 5mm drop can cover entire forearm.
6. Massage deeply into skin till it absorbs and only the light sheen from all the medicinal oils is visible. Should be clear once on skin. If you see violet hue, chances are you've used too much. Use less until you understand how your skin works with BB.
7. Wet any skin with heavy hair to make lotion more spreadable.
8. Don't engage in sweaty activities for next 4 hours. Remember this is **NOT** a chemical paint to stick on skin. That means no pump class right after applying lotion, you'll just sweat the Superfoods back out of your skin. Common sense prevails.
9. Don't use moisturiser on any skin you want to tan. For contoured or folding skin areas, wet with water first and apply a fine layer of BB, massage in, cover evenly.
10. For Medium natural tan, apply again same time next day. For darker natural tan, apply again same time on day 3. To maintain, apply weekly thereafter.
11. Best to apply and leave on at least 4 hours. This lotion is highly beneficial to skin, feel free to leave on till your next shower.
12. Should be ok to get dressed in 1 or 2 minutes.
