

SonicCloud Enterprise Sound Personalization

For Remote Work: Teams, Zoom and More!

SonicCloud is a powerful app that allows you to enhance and personalize **all** the sound on your computer, especially if you have **mild to profound** hearing loss.

It's a game changer for people like Michelle, who have trouble hearing clearly on their laptop or desktop machine. Michelle [discovered it at the HAAA 2019 convention](#) and now **no longer** needs anyone to recap her company Webex calls.

Use it for **Remote Work** Video Conferencing from home, **Remote Learning**, watching training videos or lectures, or just relaxing and watching Netflix or listening to Spotify on your Windows or Mac computer!

Here's what Michelle (from Page 1) had to say after she used SonicCloud for the first time on a company Webex call:

Hi Larry,

I attended my first virtual meeting yesterday using SonicCloud!!! :) ... It worked like a champ!... We had ~130 attending...

There are so many great things about this, but here's an abbreviated list:

- I didn't have to ask someone else for the key content of the meeting...because I actually heard it for myself.
- I followed technical content on the slides, rather than resigning myself to think, "Hey, that's an interesting cross section...I wonder what they're looking for?". I'm actually going to follow up with the presenter to see if I can help out on the program, which is something I've NEVER done, since I'm never quite sure if I understood the content correctly. This is empowering me to take back control of my own career, rather than being heavily reliant on others to set my path.
- I didn't have to pretend to laugh at something that everyone else was laughing at...because I heard the joke for myself.
- Since we're all working from home these days, I even heard a dog barking in the background while the presenter was speaking!
- I got so comfortable with the fact that I could hear clearly, that I started processing data while listening in. Multi-tasking during a meeting is something that I don't do well, since most of my effort goes into listening. XXXXXX actually sent me a text message to "PAY ATTENTION!" since XXXXXX thought I was goofing around and not listening to the meeting. The truth is...I was doing other things at the same time *because* I could hear the meeting clearly!
- And of course, one of the best things (for me, at least)...stereo. It's never not incredible for me to hear in stereo.

Truly amazing. Thank you...

Best-

-Michelle
