

TOKYO led profile: Installation instructions

For wooden and ceramic flooring

a) Front lighting installation:

Drill and countersink the profile. Then fix the profile to the floor and, finally place the led strip.

To reinforce the fixing, place the screw as indicated in the lower part of the profile.

b) Side lighting installation:

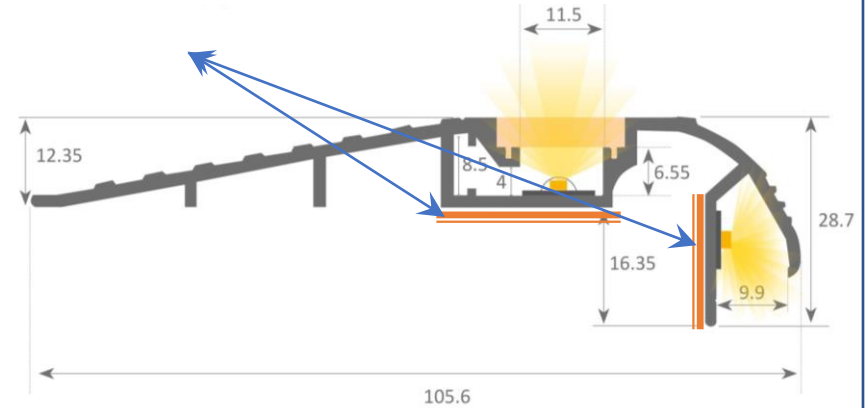

Drill and countersink the profile. Then place the sliding plate and the led strip in the profile. Finally screw the profile to the floor.

For carpet flooring

a) Front lighting installation:

Glue the profile to the carpet using the same adhesive for carpet to floor.

b) Side lighting installation:

Place the sliding plate and the led strip in the profile. Then glue the profile to the carpet with the adhesive already used to fix the carpet to the floor.

Important
Place the plate and led strip before
securing profile in place
