MAGNO DIMMING

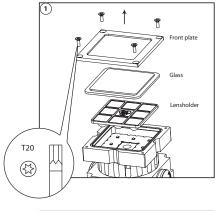

LENS REPLACEMENT

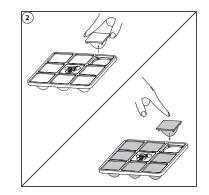

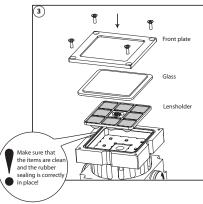

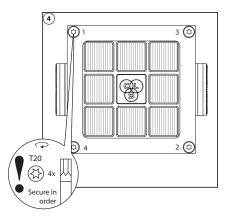

1. Place the magnet on the backplate, at the indicated spot.

- **2.** The REVO starts slowly dimming from 100 1% in approx. 30 seconds. The dimming is very accurate and precise, so steps are very small.
- 3. At the desired intensity level, take away the magnet.
- 4. After 10 seconds the REVO flashes one time, the value has been stored on the internal memory.
- 5. When powering up the REVO, the stored value will be recalled from the internal memory.
- 6. If you want to have a lower value, replace the magnet and the REVO dims further to lower levels. To store the new setting repeat step 3 – 5.
- If the REVO is being dimmed to Level 0 and you have not programmed a value, it will automatically start at Level 100 and dim back from 100 - 1%.
