

Hanging

DESCRIPTION

Dalia is a high-performance linear luminaire for suspending (up to 178 lm/W) with a trapezoidal section of 9cm x 11cm.

Available in a wide range of colours, with a textured matt finish, it anticipates interior design trends to offer architects and designers a wide range of opportunities for expression.

The transparent microprism cover with UGR<19 improves performance and significantly reduces glare.

The absence of flickering throughout its dimming range prevents visual fatigue and improves well-being and concentration.

The long-life led modules and driver can be replaced due to the removable tray with easy access. This means extending the lifespan of the luminaire and reducing environmental impact.
