80049204	PTFE thinwall tube 8 x 4mm L= 50mtr

Dear valued customer,

We hereby certify that we manufacture products made of virgin PTFE coming from the major international producers. Virgin PTFE is harmless from the physiological point of view and therefore applicable in the food industry according to the following requirements:

 USA regulations

FDA, Food and Drug Administration, Department of Health and Human Services, Code of Federal Regulations 21 CFR Ch. 1, sections 177.1550 (a)(1) and (b)

There are no objections against the use of products made of virgin PTFE for articles intended to come into contact with foodstuffs provided that the finished article is fabricated by good manufacturing practice and is generally suitable for the intended application.

In any case, it is the customer's responsibility to test finished food contact articles to ensure compliance with the extractives and migration limitations of applicable regulations.
