This mount is designed for attachment to GPR brand Steering Stabilizers.

**Warning:** Installation of the mount should be performed by a qualified technician. Improper installation may interfere with the safety and proper operation of the product and/or vehicle.

1. Place the motorcycle on a center stand.
2. Using the 5mm Hex Key, remove the two large screws that fasten the Stabilizer to the bike as shown in Figure 1. These screws will not be reused.
3. Using the 5/32” Hex Key, fasten the Base Plate and Stabilizer to the bike with the Spacers, M6 Lock Washers, and appropriate length M6 Screws as shown in Figure 2.
4. Use the 5/32” Hex Key to loosen the Positioning Screw as shown in Figure 3.

5. Fasten the accessory device or cradle to the top of the Mounting Plate utilizing appropriate hardware. The eight “AMPS” pattern holes (1-8) will accommodate #8 or M4 screws. The larger hole (9) will accommodate a 1/4” or M6 screw. Alternatively, double sided adhesive tape or hook and loop fastener may be used.

6. Adjust the mount to the desired position and tighten the Positioning Screw to lock the assembly in place.

Warning: Verify that the position of the mount and accessory will not interfere with proper operation of the vehicle.

Warning: Make sure all screws and nuts are securely tightened before each ride so that the assembly will not move during use.
