

## IMPROVE SCHOOL COMMUNICATION AND SAFETY

SafeCeiver taps into the power of two-way radios for timely responses in every classroom

**SAFETY DRILLS**

**LOCKDOWNS**

**ACCIDENTS**

**FIELD TRIPS**

**EVENTS**

### Typical Device Limitations:

- X** Wi-Fi is great indoors, but unsuitable for most outdoor and long distance applications
- X** Cell phones are usually privately owned and may not be fully charged when needed
- X** During emergencies, cellular networks and Wi-Fi are often unavailable

### Two-Way Radio Advantages:

- ✓** Radios are mobile
- ✓** Radios have long battery life
- ✓** Radios are easy to use
- ✓** Radios work when cellular or data networks don't
- X** Radios are expensive, so most schools have only a few radios compared to staff

Thanks to new technology in the SafeCeiver device, every staff member can now clearly hear important radio communication during drills, field trips, crises or emergencies.

SafeCeiver is a mobile listening device that easily and instantly tunes into your school's two-way radios to provide real-time updates and directives to your staff.

### SafeCeiver is reliable and simple to use:

1. Insert the earpiece 1/8" plug into the device to power up the SafeCeiver device
2. The SafeCeiver device will automatically tune to your school's radio frequencies
3. Insert the earpiece into your ear to listen for instructions
4. See the channel info on the LCD display, and scan up to five saved frequencies
