You can measure vibrations, track your daily vibration exposure and view the tool's battery level and health.

Mirka = a dust free workshop

Wood Sanding

Sanding Doors and Windows

Get a flawless finish with less dust and better productivity in your manufacturing by using Mirka's dust-free solutions.

Combine Mirka's award winning sanders with Mirka abrasives to achieve an end-result that will exceed expectations.

Door and window frames can be a challenge to sand, due the difficult shapes and working positions. With Mirka tools, sanding even trickier parts can be effortless and efficient.

Sanding Profiles and Contours

Sanding complex parts can be done more efficiently and effortlessly by choosing Mirka abrasives. When sanding profiles, corners, and curved surfaces, for example, ceiling mouldings, door mouldings and floor mouldings, we recommend using Mirlon Total, depending on the type of surface and depth of contours you are going to sand. All concave, convex or the most complex shapes take shape with ease.

Sanding Plane Wooden Surfaces and Boards

When using wood in construction and decoration projects, sanding is important. A piece of wooden furniture, such as a cupboard, needs to look its best, and this is where a high quality sanding process is crucial.

A good sanding result is especially important for products where wood grain remains visible in the finished product, but also if you are planning on applying paint or lacquer. The better the preparation, the better the result. Mirka offers abrasives and tools to help you achieve a flawless end result, together with our dust-free solutions which make it possible for you to sand with virtually no dust.

Intermediate Sanding of Paint Coats on Wood

When painting wooden surfaces such as cabinet doors, dining tables or similar, you want to have a smooth finish when it is time to apply that final coat of paint.

To ensure this, every layer of paint must be flawless. No matter how careful you are, there is always a risk for bubbles in the surface, or particles such as dust sticking to the wet paint.

The solution is to sand the surface between applying coats of primer and paint. With Mirka's solutions, intermediate sanding can be fast, easy, and dust-free.

Dust-free sanding

Mirka electric sanders are brushless, powerful, lightweight and have low vibration, making them a popular choice for many woodworkers. When used with dust-free abrasives and dust extractors, these sanders enable a flawless dust-free environment.

Hand sanding tools can also be used with a dust extractor when fitted with the hose for hand sanding blocks.

Deros 650CV - 150mm Sander, 5mm Orbit

A cleaner & healthier workshop

1230 M AFC Dust Extractor
SKU: 8999228111

Today, health and safety issues are becoming increasingly important. Sanders and abrasives are made more and more efficient, with focus on dust-free applications.

This development places higher requirements on the dust extractors. Mirka's range of dust extractors and accessories meet the demands of the market and of the health and safety authorities.
