Description	Allows you to create a leg anchor for any OL or SB for stage reinforcement and cassette deck system. The primary use of this bracket is to install the cassette decks in a slope, or simply elevated from the ground. Useful to add reinforcement, but mainly used as primary support for the cassette decks, in order to link the pile to the cassette deck. The bracket comes in a dual (used for single and dual) or in a quad (used for a dual third and quad application).
