FEATURES AND BENEFITS

- The supports are made of <u>polypropylene</u> a neutral, non-organic material that does not affect the roofing.
- Each pedestal can support a total load of <u>800 pounds</u>. Considering a load of <u>100 lbs per square foot</u> you can install an adjustable support every 2' if your roof allows it. If you install a pedestal every 4 ft the load capacity per square foot will be 50 lbs per square foot.
- o Deck TO/GO offers a 1 year <u>replacement warranty</u> for residential use on supports and accessories.
- You can choose to <u>fix your adjustable supports</u> to your existing floor, if needed. However, this is <u>not mandatory</u> and <u>complicates</u> the installation.
- o It is very important **NOT** to fix the supports to your roof.
- o <u>Confirm with your local engineer</u> that the installation meets building standards for your area for both roof and wind loads.
- o If your installation is in a very windy area, your local engineer will probably recommend that you <u>close the sides</u> with planks of wood and in some cases, add flower boxes as <u>counterweight on the edge</u> of the deck.

The DTG-extender is designed to be used with the DTG-adjustable pedestals and the DTG-Collar to add between 65 to 105 mm to your pedestal system. Collar included.

Box of 8

SKU: 842315030095

The slope corrector allows to adjust the slope from 0 to 5 degrees. This product is compatible with all the DTG-pedestal supports.

Sold individually.

SHEET TO CALCULATE THE NUMBER OF SUPPORTS NECESSARY TO BUILD YOUR TERRACE

The spreadsheet can be downloaded from our website.

1. I use the graph if needed and I draw my terrace

Х	_																_
À	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	٠.
	•	•	•	•	•	•	•	•	٠	•	•	•	•	•	•	•	•
	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•
	•	•	•	•	•	•	•	•	•	•	•	•	٠	•	•	•	•
	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•
	•	•	•	•	•	•	•	•	•	•	•	•	•	•	•		
	•	•	•	•	•	•	•	•			•	•	•	•			
	•	•	•	•	•	•	•	•	•	•	•	•				•	
	•	•	•	•	•	•	•	•		•	•	•			•		
	•	•	•	•

2. I calculate the number of adjustable supports I need:

Number of tiles in Y = + 1st support = | = Y Result

Number of tiles in X = + 1st support = = X Result

I multiply the Y result by the X result:

→ X =

<u>Total number of adjustable</u> <u>supports needed for my project</u>
