

# HOW TO CLEAN STAINLESS STEEL AND ACRYLIC SURFACES

All MEF metal tables, bars and frames are produced using high grade stainless steel (Alloy Type 304) hand welded and polished to a mirror finish. This grade is easy to form and fabricate with excellent resistance to corrosion.

The only recommended way to clean your MEF metal furniture and acrylic inserts is with water or a non-toxic and non-citrus based cleaner. Most glass cleaning products contain ammonia which causes scratching and dulls the finish on acrylic inserts. Cleaning with chloride-containing detergents must be avoided.

MEF has tested many stainless steel cleaners and most leave a greasy film. DO NOT USE Windex or other ammonia based cleaners as they dull and scratch the surface of acrylic. We recommend **"Glass N Stainless Steel Cleaner"** by **Spray Nine** using a soft abrasion free cloth with clean gloves to guard against stains or finger marks. Avoid the use of oily rags when wiping the surface.

Please follow directions by the manufacturer on the label.
