BENEFITS OF EVA FOAM

Compared to the cheaper PE foam alternative, EVA foam is a far more superior material in terms of protection and durability.

PE foam is lighter and doesn't offer as much impact absorption. If you apply pressure to PE foam vs EVA foam, you will definitely see and feel the difference. The lightness of the PE material also means it will deteriorate faster with each wash and wear cycle, meaning you will need to replace it more frequently in the long term.

RUBBER GYM FLOORING TILE - 15MM

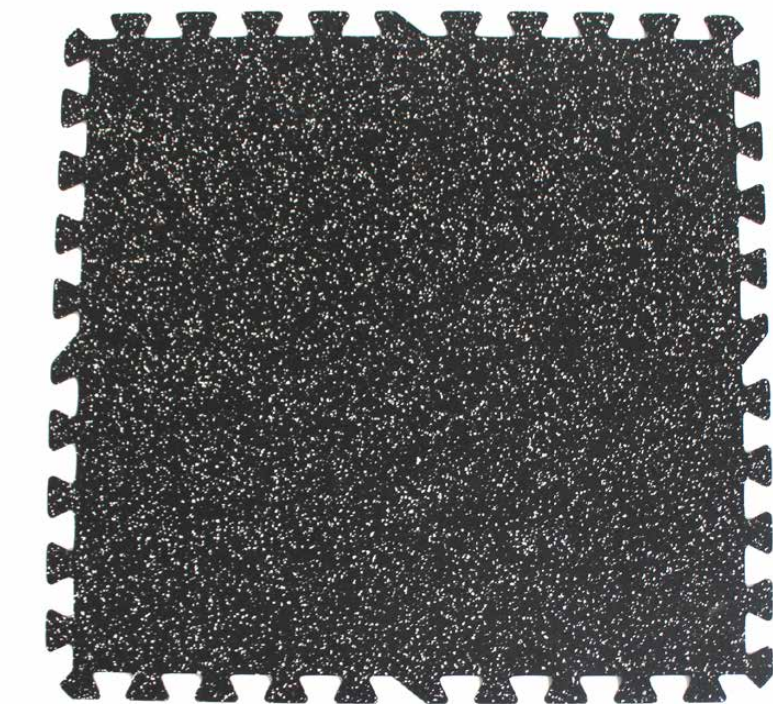

- We've engineered a gym tile with recycled rubber tyres and EPDM rubber that is an extremely durable synthetic rubber. Sealed with European Polyurethane Binder these tiles are odourless - no toxic fumes!
- The tightly compressed rubber provides an even impact absorption, flat surface and strong grip. Due to the EDPM Rubber; the tiles won't expand or shrink in different temperatures.

HIGH PERFORMANCE ATHLETIC FOAM

For exceptional shock absorption

Dollamur mats are manufactured using the latest in athletic foam technology. The closed-cell, 10cross-linked foam provides maximum shock absorption and will never harden or shrink allowing mats to maintain performance throughout their life.

EASY MAINTENANCE

Dollamur mats are treated with an anti-microbial for added protection

Thick, durable, anti-microbial vinyl will never crack or peel.
