1

Lay turf in sun for a few hours to help remove and kinks caused from storage.

2

Clean and level the installation surface prior to laying turf. Always measure before using adhesive. Best to lay gym tiles first.

*\*Please note the turf is not to be installed on the rubber tiles.*

3

Purchase 'Synthetic Turf Adhesive' & 'Applicator'.

4

Roll out in studio where desired, use applicator to apply adhesive on one end of the turf. Wait until this section has dried and pull the other end tight - add another line of adhesive at other end.

\*If you feel there are a few areas that lift up then it is recommended to use the adhesive. Best to use it sparingly.

*\*For the best results SMAI recommend the use of professional installers for the perfect finish.*
