How do I mount the solar panel?

You can mount your device directly onto wood using the included screws. If you are mounting onto brick, concrete, or stucco, mark the holes first using the bracket, drill a hole for the anchors. You can then insert the anchors and subsequently use the screws to secure the mount.

## Where should I install the solar panel?

You can mount the solar panel within 6.6ft / 2m (max cable length) of your Arlo Pro camera. Install your solar panel at a location where it will receive a few hours of direct sunlight daily. The solar panel can be mounted onto walls or roofs .

The amount of energy that the solar panel can produce is determined by sunlight exposure, weather conditions, etc. You have to consider where to place your solar panel according to geographic location. To maximize the power generated by your solar panel, please do the following:
- Choose the best location for your solar panel to get maximum sunlight exposure throughout the year.
- Clean the surface of the solar panel regularly to remove dust covered which might affect the energy conversion.
How do I adjust the solar panel?

The 360 degrees rotatable mounting bracket allows you to adjust the Solar Panel in the best position to absorb sunlight.

How do I connect the solar panel to Arlo Pro Camera?

Open the silicone cover at the back of your Arlo Pro Cam, and plug in the micro USB cable from the solar panel. Please make sure the waterproof plug of the cable cover the connection point tightly.
