

Wrist Measurement Tool

In order for this measurement tool to work properly it **must be printed at 100% scale**. When printing choose "More Settings" or "Advanced Settings" and "Scale 100".

This tool already deducts 1/2" from the circumference of your wrist so the number you see is your size. If you chose to use a measuring tape instead you must then subtract 1/2" to get your cuff size.

For more information click for our [Sizing Chart](#) page or go to www.crashjewelry.com/pages/sizing-information
