

StandCrafted™ Presents Progressive Wall-mounted Standing Desk Lineup at NeoCon East 2016

November 3, 2016 – StandCrafted is a Washington DC small business focused on creating wall-mounted standing desks that enhance modern designs within business interiors, influence proper ergonomics, and leverage environmentally conscientious materials.

StandCrafted desks present new options in a furniture market saturated with tabletop and self-supporting standing desks. Businesses have a new way to improve real estate efficiencies in space-challenged environments where an average StandCrafted desk takes up only 10 square feet of space. Architects can also choose to leverage StandCrafted desks in creative new ways, especially in areas that are often under-utilized. StandCrafted desks may often be used in high-traffic common spaces, coffee shops, coworking businesses, collaborative open offices, privacy nooks, medical consult rooms, executive offices (accompanying traditional desks), conference rooms, point of sale areas, kiosks, libraries, data centers, and warehouse / industrial facilities.

Combining elegance and ergonomics, all desks are built upon the StandCrafted Spine, a floating core that mounts to surfaces including drywall, masonry, and even thick glass. The Spine comes in 46", 30", and 14" sizes to support diverse functional requirements. Each Spine features a unique rear facing cable management conduit to encourage an organized, clutter-free workspace. The Spine also allows for a variety of modules to move freely along the vertical axis and slide securely and quickly into place. Modules include:

- VESA-compatible monitor module
- Small table mount
- Keyboard/mouse/trackpad mount
- Laptop tray
- Drafting Table for a tablet or laptop
- Coat / Purse / Bag Hanger

StandCrafted's current production line is sourced from sustainable bamboo and recyclable high-density polyethylene (HDPE) plastic (multiple color options available). Both materials maintain LEED credit specifications. Additionally, StandCrafted maintains a flexible manufacturing environment allowing diverse material options to compliment many interior design preferences.

StandCrafted offers preconfigured packages combining spines with varied modules that are suited for diverse environments. StandCrafted is also open to supporting custom orders for customers with unique functional needs and materials. Stop by Booth 1427 at NeoConEast 2016 in Philadelphia, PA November 9-10 to learn more!
