

CoyoteWhiskers - Assembly Instructions

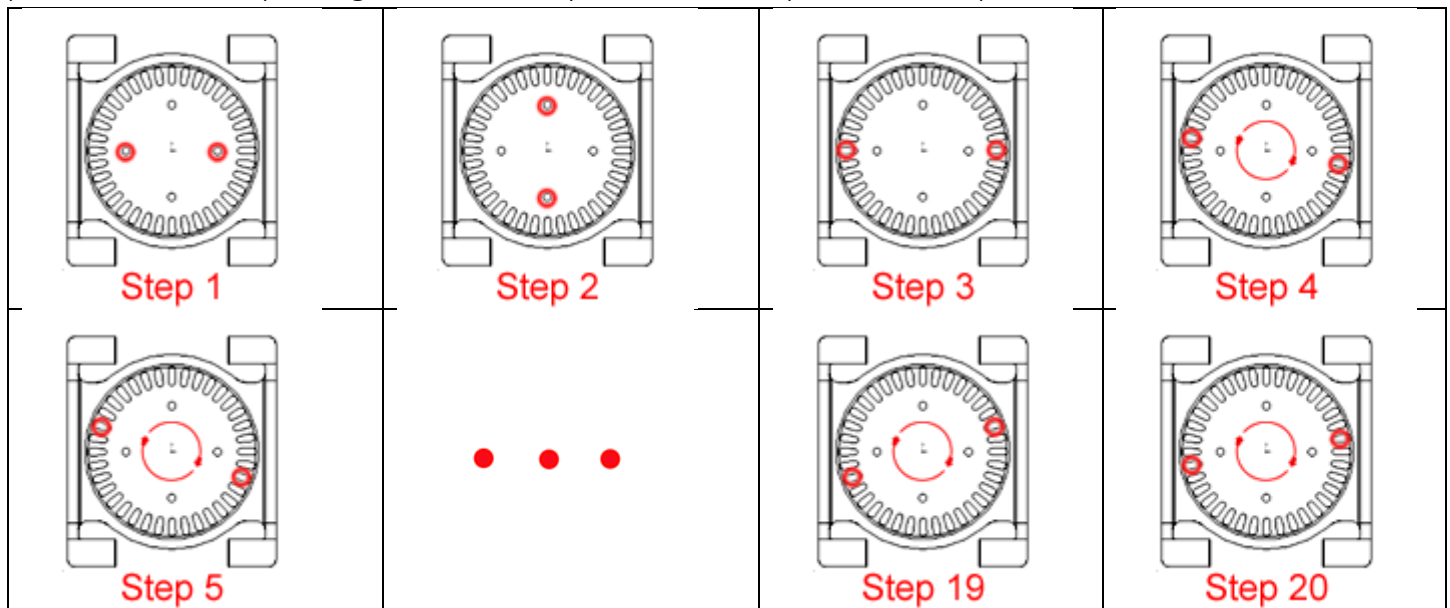

VIDEO: www.coyotevest.com/pages/whiskers

Adding Whiskers to cups:

Insert 20 nylon strands into each plastic cup as shown:

Start with two in the center, then start at opposite ends and place one, shift one slot clockwise and place another – repeating until all twenty strands are in place. The sequence is illustrated here:

Mounting cups on strap: Place one cup on the short strap and three cups on the longer strap - fuzzy side up. To attach squeeze the strap lengthwise, slide one side under the clips, and then snap the other side under the opposite side clips. Once the Velcro is secured to the vest the cups will stay attached during normal activity, but if necessary you can lock the cups in place with a dab of glue as shown below.

Placing the collar whisker on vest to prevent it from falling off:

<p>Choice 1: Place 2" strap sideways, under the collar spikes. Cup is locked and can't slide off.</p>	<p>Choice 2: Cut strap to 1.5", mount cup on strap and apply glue as shown, place on vest lengthwise.</p>	<p>Mount cup on strap and apply super or hot glue between cup and fuzzy side of Velcro strap at 4 points.</p>
