Diagram assumes that switch & pots will be ground via metal control plate.  
If you do not have a metal control plate to form ground between switch/pots please add a strip of shielding or a ground wire between them.

If your bridge pickup has no metal baseplate, please ensure you add a separate ground wire from your bridge to pot casing

**This diagram has been drawn with traditional 2 conductor pickup wires in mind. If your pickup is different to this, then please refer to that manufacturer's wire colour coding prior to installing.**

***Important note***

**Please take care of yourself and your guitar when carrying out any guitar wiring work.
