

How to choose an earlier point in time for restoring folders and files

Restore from a Point in Time

The standard guide for showing how to restore from the most recent backups is available here:

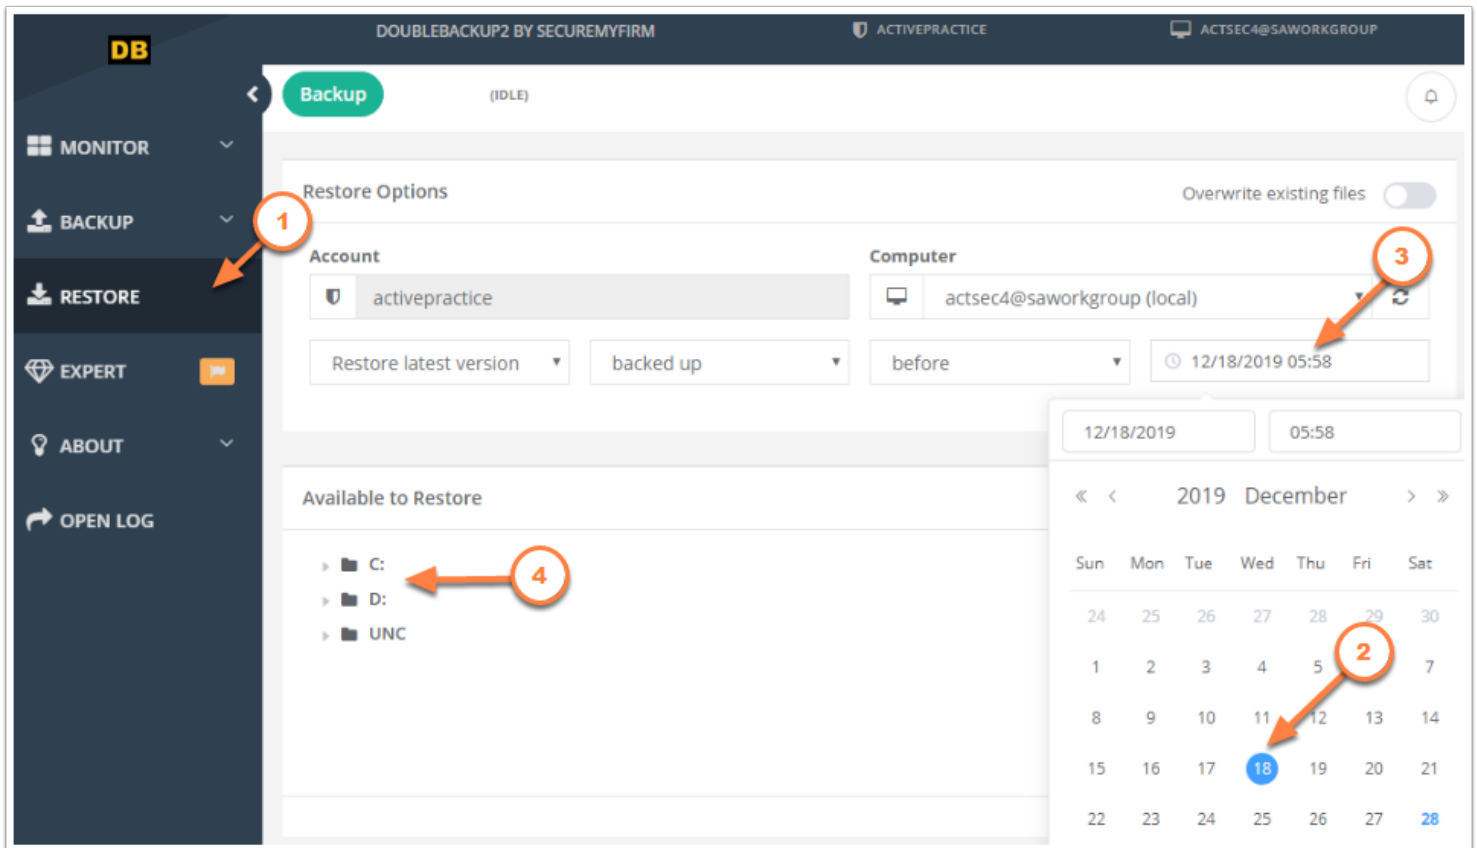

<https://www.securemyfirm.com/pages/help>

You may need to restore folders or files from a point in time earlier than the most recent backup. For example, if you discover a ransomware attack after one or more backups have run, you need to go back in time to restore your files.

How to restore from a point in time:

1. Click the **Restore** tab.
2. Choose a date on the calendar.
3. Option: Click the time to choose a different time.
4. Choose the folders and files to restore.

See the guide, **DoubleBackup Restore Guide**, for details on restoring.

Choose Folders and Files to Restore

Scroll down and expand the folders under **Available to Restore**.

1. Click the blue Plus [+] icons to select folders and files.
2. To unselect any folder or file, click the red [-] **Remove** icon.
3. Optional: Change the **Restore location** by clicking the [...] icon.
4. Click: **Restore Data**.

For more information, see the guide: **DoubleBackup Restore Guide** on our Help page:

<https://www.securemyfirm.com/pages/help>

The screenshot displays the DoubleBackup Restore interface. On the left is a dark sidebar with navigation options: DB, MONITOR, BACKUP, RESTORE, EXPERT, ABOUT, and OPEN LOG. The main area features a header with filters: 'Restore latest version', 'backed up', 'before', and a clock icon with the time '12/18/2019 05:58'. Below this is the 'Available to Restore' section, which shows a file tree structure. The tree is expanded to show the following items:

- C:
 - Backup
 - VirtualMachines
 - ACT19
 - ACT19.vmsd (0 bytes, 03/23/2019 07:18 PM, 12/09/2019 07:19 AM)
 - vprintproxy.log (1 KB, 12/14/2019 03:31 PM, 12/16/2019 02:15 AM)

Each item in the tree has a blue Plus [+] icon to its right. The 'ACT19.vmsd' file is selected, and a green checkmark is visible in its rightmost column. Below the file tree is the 'Restore Queue' section, which contains a table with the following data:

Path to restore	Subfolders	Remove
\\?C:\VirtualMachines\ACT19\ACT19.vmsd		

At the bottom of the interface, there is a 'Restore location' field containing the path 'C:\Restore\saworkgroup\actsec4\20191228_175824'. At the very bottom right, there are two buttons: 'Clear Queue' and 'Restore Data'.
