Charging your vFit device

Locate the charging port.

It is at the tip of the larger end of your device, near the buttons.

Plug in your device.

Turn the device so that the buttons face upwards.

Position the USB cable with the wider side of the plug at the top. It should match the shape of the port in your device.

Warning: Do not invert plug.

Forcing the plug in the wrong direction may damage the port in your device, causing internal components to loosen or disconnect.
