McIntosh® Premium Cables

McIntosh premium cables are engineered to highlight the performance of our brand's speakers, amplifiers, control centers and source components. These cables will perfectly complete your McIntosh audio system and are designed specifically to optimize the performance of our products.

The construction quality of McIntosh cables has to be of the highest order since the cables are built to match the renowned longevity of all McIntosh products. Our cables therefore have a Lifetime Limited Warranty against failure under normal use.

Balanced Audio

McIntosh Balanced Audio Cables are designed to enhance the ultra-low noise performance of McIntosh components. McIntosh uses two balanced conductors with a separate ground while adding a fourth chassis ground to further prevent interference. McIntosh balanced cables eliminate induced background noise – leaving only pure music.

Speaker

McIntosh Speaker Cables contain two large conductor groups made from the finest pure copper. The two conductor sets are further contained in fire proof insulators, covered in an attractive black mesh jacket and terminated into gold plated, solid brass, spade connectors. McIntosh speaker cables will pass the full power of any McIntosh amplifier with full Fidelity.

Audio

McIntosh Audio Cables use the finest pure copper conductors with multiple electromagnetic shields to maintain audio signal purity while blocking outside interference. Gold plated, solid brass connectors ensure secure signal transmission and the best audio performance.

Power Control

McIntosh Power Control cables allow full functionality of a McIntosh audio system. Products that are interconnected using these cables will all turn on and off with the preamp control center, operate using one remote control and allow meter lights to be turned on or off depending on your preference.

Digital Audio

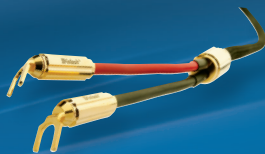

McIntosh Digital Audio cables use the finest pure copper conductors which are silver plated for enhanced digital bandwidth. Twice the normal shielding layers are used to insulate against outside interference and limit radiation of digital noise into the analog sections of the audio system. Gold plated, solid brass connectors are used to assure secure digital data transmission and the best audio performance.

For the Consumer's Protection: In order to ensure the highest level of customer satisfaction, new McIntosh products may only be purchased from an Authorized McIntosh Dealer; and, with certain limited exceptions may only be purchased over-the-counter or delivered and installed by the Authorized McIntosh Dealer. McIntosh does not warrant, in any way, products that are purchased from anyone who is not an Authorized McIntosh Dealer, or that have had their serial numbers altered or defaced.
