

EZiSYSTEM Clamp Sonde

Trace your camera from above the ground

Benefits

- Rugged and compact
- Easy to fit
- 33kHz Frequency
- Works in harsh environments

This rugged, compact unit is ideal for all drain cameras and emits a 33kHz signal which can be picked up by a standard cable locator. The Clamp Sonde is easy to attach and transferrable between cameras.

You can locate and determine the depth of your sewer or pipe inspection camera. When attached to a camera system and inserted into a drain, sewer or pipe, the signal transmitted from the Clamp Sonde can be located using any standard cable locator. This is useful in locating blockages and obstructions in non-metallic pipes.

The unique Clamp Sonde offers an unprecedented level of functionality and flexibility

EZiSYSTEM Clamp Sonde

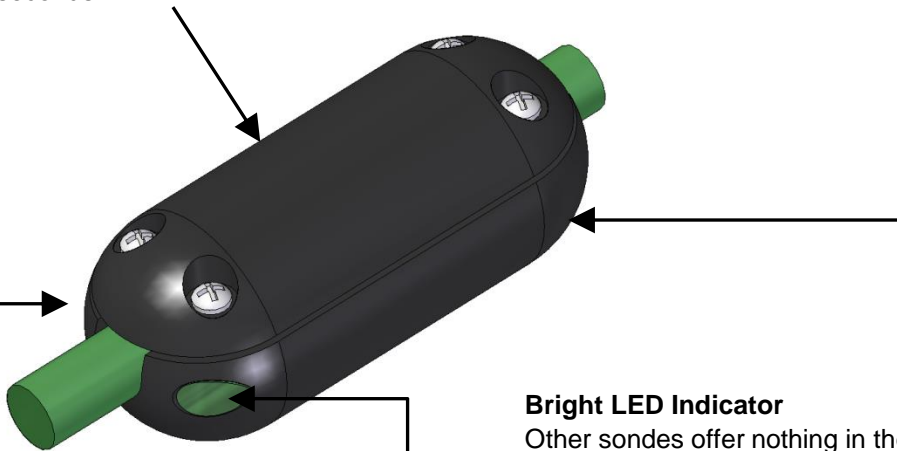

Trace your camera from above the ground

Simple Clamp system

Using only a screwdriver the EZiSYSTEM Clamp Sonde can be attached to any cable up to 12mm diameter in seconds.

Rugged and Compact Design

Measuring only 40mm in diameter and 95mm in length the EZiSYSTEM Clamp Sonde is designed specifically for the most restrictive environments. Built to be fully submerged it can be attached to almost any equipment in the harshest environments.

Battery Power

Powered by a single standard AAA battery you can typically expect up to 12 hours of continuous use. The battery can be replaced quickly and easily without having to detach the unit from the cable.

Bright LED Indicator

Other sondes offer nothing in the way of user feedback – it is often difficult to tell whether they are switched on and transmitting a signal! As with all EZiSYSTEM sondes the Clamp Sonde has a bright LED to show the battery is OK, inserted correctly and the unit is functioning.

Technical Specifications

Diameter	40mm	Length	95mm
Weight	135g (including battery)	IP Rating	IP68 (tested at 1bar pressure – 10m)
Battery Type	Single AAA battery	Battery Life	12 hours continuous use (room temperature)
Frequency output	33kHz	Range	up to 3m
