## Traffic Light Controller Unit (Wireless)

Manual switching unit for controlling traffic light signals turning red or green.  
2 position wireless version.

Plug and play wireless traffic control system

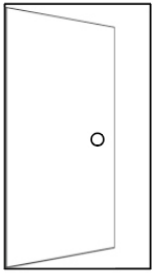

## 1. General

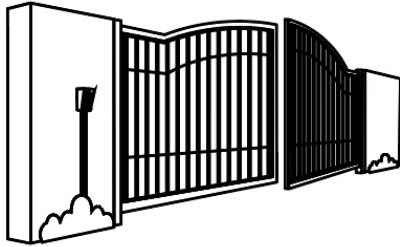

The kit is made up of a transmitter in a manually-switched housing and traffic light with 5m-power leads and 2 power supply plug in AC adaptors (one for the switch unit and other for the traffic light)

System is pre-configured and does not require programming..

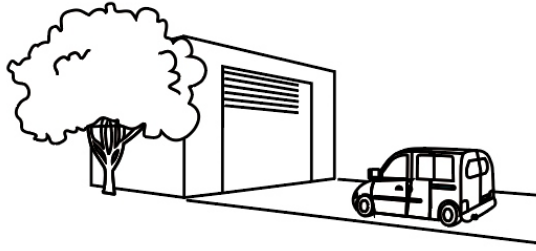

## 2. Application

Pedestrian

Auto Gates

Industrial Door

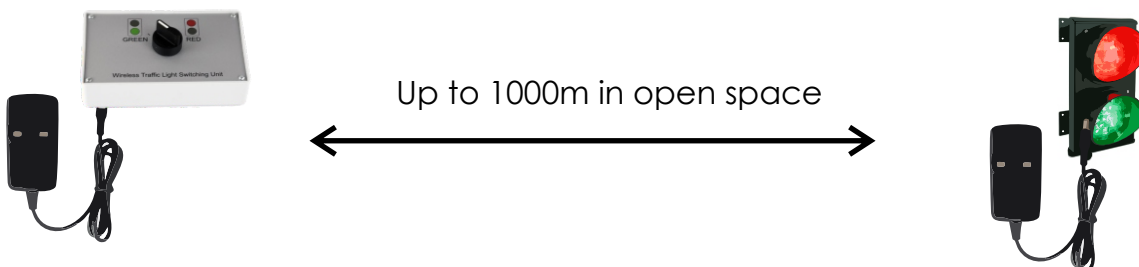

## 3. Components

## 4. Startup

Once powered up the system may require a few switches of the remote to establish communication initially (this may need to be done each time if the system is powered down). Normal operation should then be performed.

### Typical Connection of system

NOTE: range will be reduced by doors, building and other obstructions
