For locations where even the most secure cabinets just aren't enough

We have a new sheriff in town...

Standard Change-Makers is pleased to reintroduce our Security Door Guard Kits for our front load Modular Series Change machines. These steel guards are designed specifically to provide additional security for Standard MC100 and MC200 change machines.

The Door Guards are made of welded 10-gauge steel, designed to block access to door seams and the "T"-Handle slam lock. The Door Guards are attached to the cabinet with security bolts, and are fastened with lock nuts inside the cabinet. You can use two padlocks or combination locks (not provided) to secure the Door Guard.

The Door Guard Kits are finished in an enamel powder coat paint, and are hinged on the same side as the cabinet door to provide convenient opening and closing. Further, the Door Guard kits do not interfere with customer access to the Bill Acceptor or Coin Cup.

DOOR GUARD SECURITY KITS feature:

- 10-gauge Welded Steel
- Enamel powder-coat painted finish
- Security Bolts
- Allows for padlock/combination locks
- Blocks door seams & "T"-handle lock

If you have an unattended location that needs some type of additional security for your change machine, contact your local Standard Change-Makers Distributor about this economical solution.
