

## 2015-16 Kawasaki Versys 650 GPS/Cell Over-the-Clocks Mount Installation Instructions

### Items included in the kit

**Note:** we have provided 1 extra screw, extra locknut, and extra washer in your hardware bag.

**Tools needed for installation:** 7 mm open wrench and Phillips screwdriver

1. *You do not need to remove the windscreen for installation, but if you prefer to, you can.*  
Take the right arm plate (engraved with R) and attach it to the mount through motorcycle bracket with one screw, washer, and locknut at the top hole, as shown:

Use the 7 mm open wrench and the Phillips screwdriver to pre-tighten the arm plate to the bracket – just enough so you can swing the mount to attach it to the other side.

2. Now, attach the left arm plate (engraved with L) at the top hole. Pre-tighten.

3. Now, screw in the bottom screws through washer and locknut. Adjust the position of the GPS Mount and tighten all screws.

The installation is now completed.
