

# Music Kit instructions

## Kit components

- 1 x White Holly Barrel with cutout
- 5 x Black Music inlay pieces
- 3 x White inlay pieces

Barrel with laser cutout

Music inlay Pieces

### Step 1:

Remove all components from the plastic container and place on a clean work surface. Please note that the components are small and you can lose them quite easily. The parts are also fragile and should be handled with care.

### Step 2:

Take the barrel with the laser cutout and slide the brass tube (27/64) into it. **Please do not use any glue** at this stage, this is only to assist you with the assembly process.

### Step 3:

Take the white barrel and remove the cutout pieces so the openings will be clear. Do not throw anything away, some pieces will be needed for assembly. Start placing the smaller black pieces into their corresponding openings, no two pieces are alike. You might have to break some pieces to make them fit, use your own discretion.

See illustration 1

Barrel with assembled black pieces

Illustration 1

## Step 4:

Now Take the big music note and break the inside piece off as per Illustration 2

Next you can place the bigger piece of the music note in the corresponding opening. **Illustration 3**

Take the White pieces and place them into the openings in the music note and lastly place the small black piece that was broken off earlier into the opening. **Illustration 3**

Illustration 3

Fully assembled inlay piece.

## Step 5:

After all the inlay pieces are in place **REMOVE THE BRASS TUBE** from the barrel and then use small amounts of thin CA glue to secure all the pieces into place. Please **do not** soak the whole inlay with thin CA, try to keep the glue to the outer edges of each inlay piece and not in the laser detail lines which will be filled with black dust while turning and finishing the pen.

## Step 6:

Cut the barrel to length but **do not use a Barrel trimmer** it will destroy/break the barrel and all your hard work. Use a disk sander or any other method that will not destroy your blank. Now you can glue the brass tube into place with a glue of your choice and let it dry completely before turning the blank.

It is important to sand the barrel smooth before you are going to use a skew or any other turning tools.

After the barrel is sanded smooth blow the sanding dust out of the laser detail lines and rub some black/dark wood dust into those detail lines and the center piece of the flower.

Use thin CA glue to secure all pieces into place before turning the barrel to size.

While turning the barrel to size you will notice that some of the laser detail lines will need some more dust filling just repeat filling it with dust and cover with thin CA and continue turning.
