

ADAPTIVE PUTTER WHEELCHAIR INFORMATION

Our Adaptive Putter can be used with a wide variety of Wheelchairs ranging from a Posterior Seat Height of 430mm - 450mm and a width range of 350mm to 610mm. Wheelchairs with an Armrest Height of 200mm with Elevated Leg Rests are also compatible.

There are 3 critical elements when it comes to fitting your putter.

1. The Putter Length
2. The Putter Shaft Angle
3. Your Range of Movement

You have 2 positions that you can use your putter. You can putt from the front position or from the side position. The length and angle of your putter will be different for either position. We also have and recommend our Arm Sleeve pack for supporting the Adaptive Putter should your range of movement be limited.

We have 2 Putting Games that can be used with your Adaptive Putter. Both games can be played at home with family and friends. Putt18 - Scores like a round of golf where the lowest score wins and its played world-wide. Shot 4 Shot - Is a smaller game where the highest score wins.

Front position with Leg Rests

Side Position with Arm Sleeves

Front Position No Leg Rests

Side Position with Arm Sleeves
