Place holster on bracket.

Install velcro to bracket.

Secure holster with velcro straps.

5

Gently pop the cover piece.

8

Install supplied flanged phillips bolt and tighten.

6

Remove factory bolt.

9

JK Interior
Shown. JL / JT
interior similar.

The T3 mount angles the pistol back 22° with a 10° offset angle. This configuration allows for comfortable sitting position with great access to the pistol.

7

Slide rear tang of mount under the seat bracket. Line up bolt hole.

10

The 22° mounting placement allows for an efficient pistol release. Your hand will rest naturally on top of the pistol and will not be visible looking in from the drivers side window. Just drop your hand down from the steering wheel and your hand rests naturally on top of the pistol. Then peel up the thumb strap and the pistol smoothly removes out of the holster.
