DESCRIPTION

The Cold Weather Kit consists of a battery warmer with a thermostat built into the battery wrap. When temperatures fall below an acceptable level, the thermostat activates the battery warmer, maintaining optimum battery temperature for the best generator starting. These kits are recommended for generators installed in regions where the temperature regularly falls below 32 °F (0 °C). These kits include a one year limited warranty.

When installing a Cold Weather Kit, it is required that the engine oil be replaced with 5W-30 synthetic engine oil, for better engine start capability.
