

# Star Kite Kit

- Decorate your kite before adding the frame/spars to the kite.
- The frame of the kite goes on the back of the kite.
- Identify the **top point** (top or head of the kite) of the kite by the little hole in the upper center part of the skin

Insert the spars, **all the way** into the plastic connector.

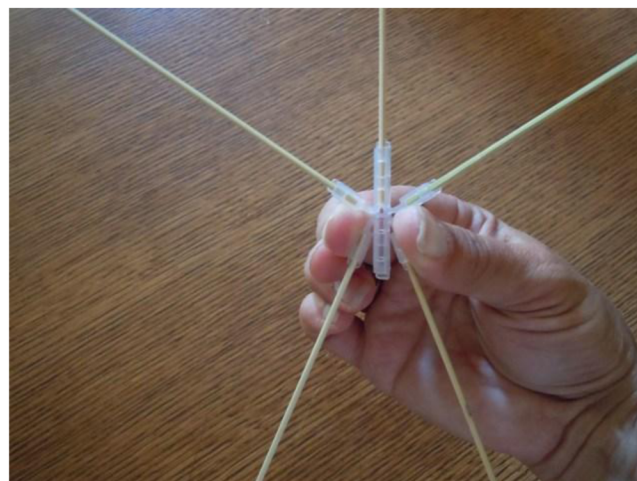

5 spars (sticks)

3 different lengths:

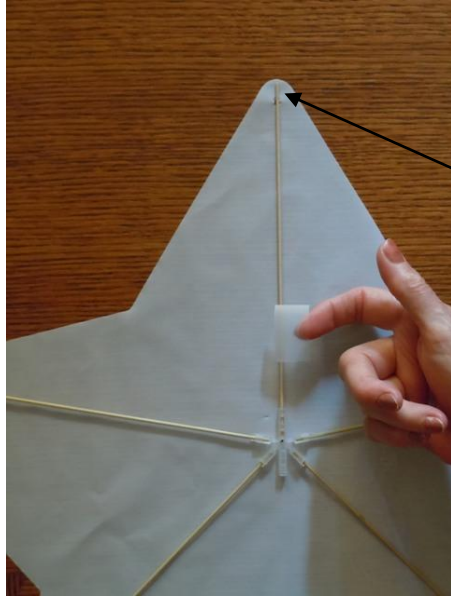

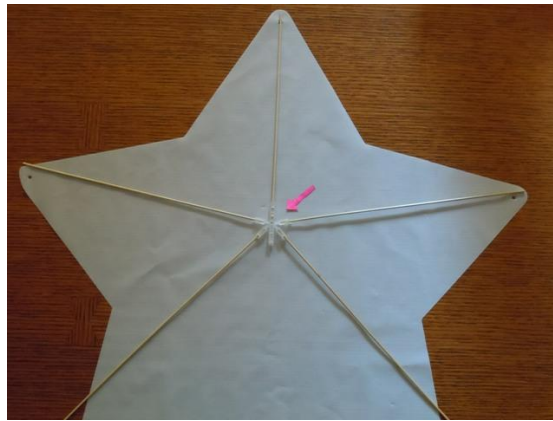

- 1 short spar (200mm) = top / head
- 2 medium spars (225mm) = middle/arms
- 2 long spars (288mm) = lower/legs

Squeeze the plastic connector as shown

*(makes it easier for the spars to match the star points)*

Line the plastic connector over the **Hole in the middle of the star**

*Notice the spar is lined up with the hole at the tip of the star point!*

Place 1" of tape about 1" above the plastic connector.

**Tape each point to each spar.**

Using about 1 1/2 - 2" pieces of tape.

Put 1/2 of the tape on the art side of the kite and then fold the other half over to the back side of the kite, taping the spar to the kite sail.

*Rub the tape down to seal properly.*

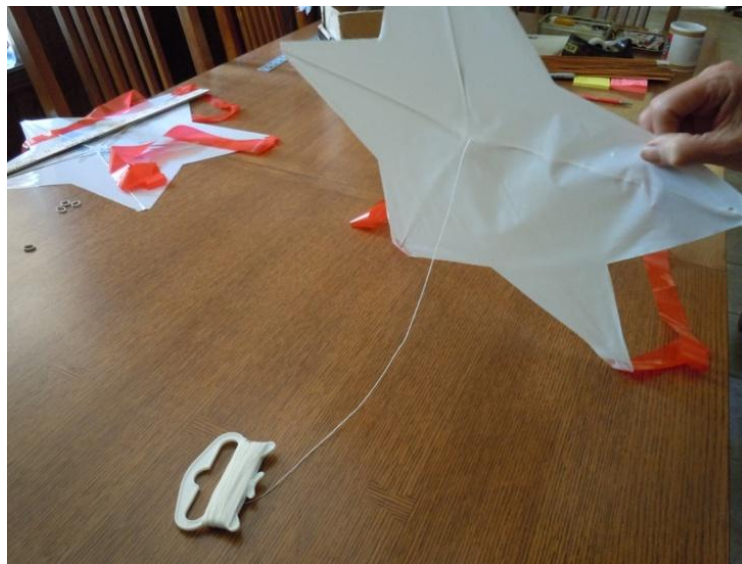

Tape tail on each leg

## 1 Kite-1 winder

Run this line through the hole in the kite and plastic connector  
Front to back.

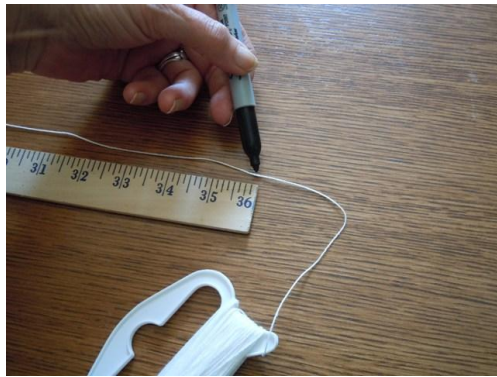

Tie the rubber band to the string at the back of the kite

**Your Kite is ready to Fly!**

## Multiple Kites, 1 Winder = Kite Train

Mark your flying line every 36" with a marker

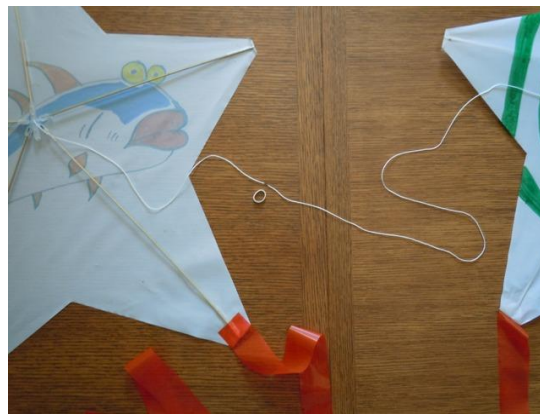

The kites will be held by the rubber band (and wind) at each of these marks, plus 1 kite tied off at the end of the string.

Put as many of the kites you want on a winder up to 10 kites/winder. *More kites than that and we strongly recommend you invest in stronger flying line.*

*Run the string through all of the kites you wish to train, front to back.*

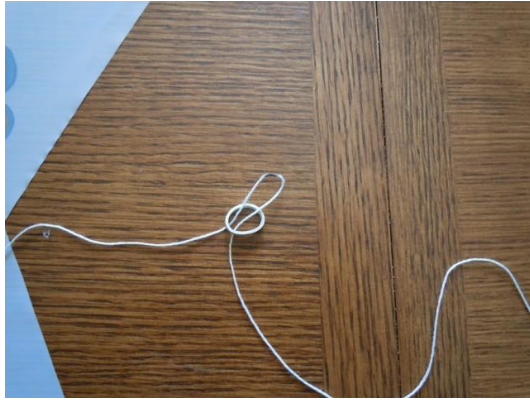

***The Winder must be in the front of all the kites!***

*Attach the Rubber band at each of the marks, in between the each of the kites*

**Start with the very end of the string and tie on the first Rubber band.**

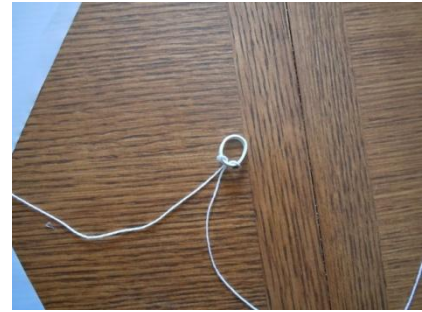

Leave 1 kite with this end knot.  
Move the rest of the kites up the line just past the black mark on the line.

Attach a Rubber band to the string

Pull the string through the rubber band and then the rubber band back through the string loop you just made.

Repeat as necessary.

Have fun!
