

Use this guide only if you want to connect your Joovv devices via hardwire versus through Bluetooth.

After assembling your Joovv Duo, Max, Quad, or Elite system, use the included auxiliary cables and follow the next steps:

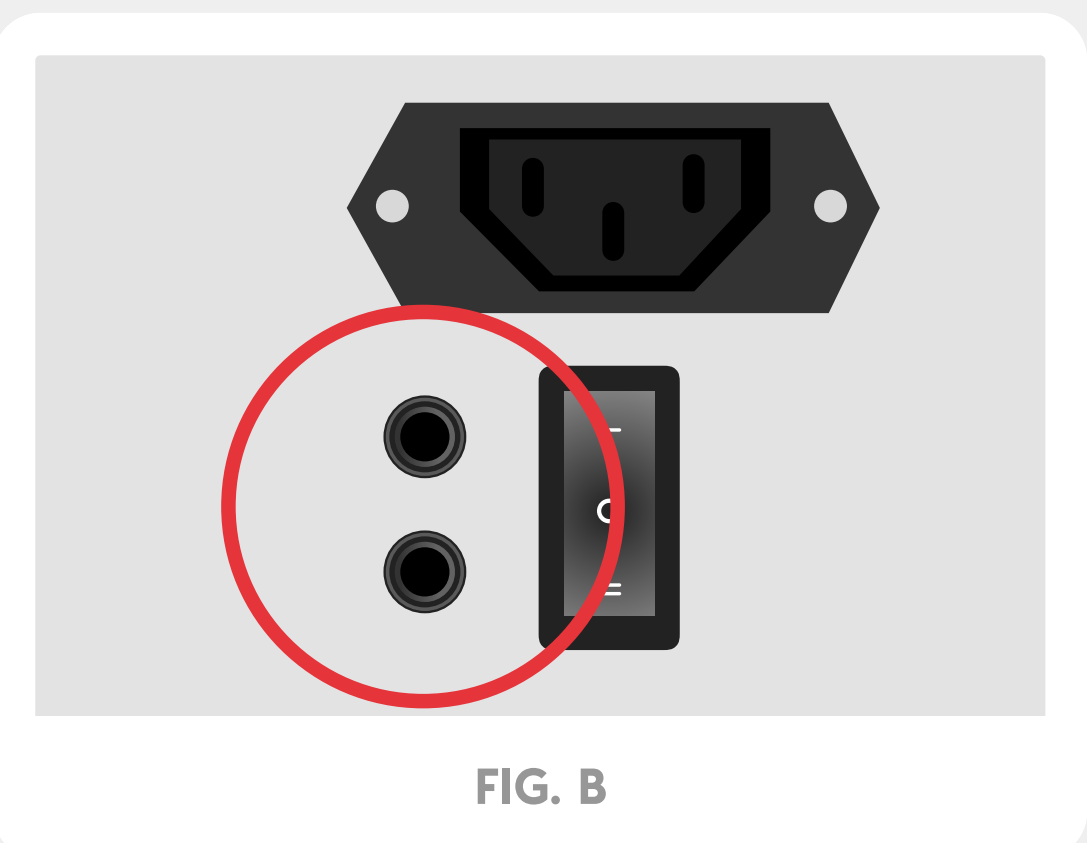

STEP 1

Unplug the power cords from the power supply and make sure the power switches on each device are in the off position. Then, turn all the pairing switches to “Neutral”, as shown in **Figure A**.

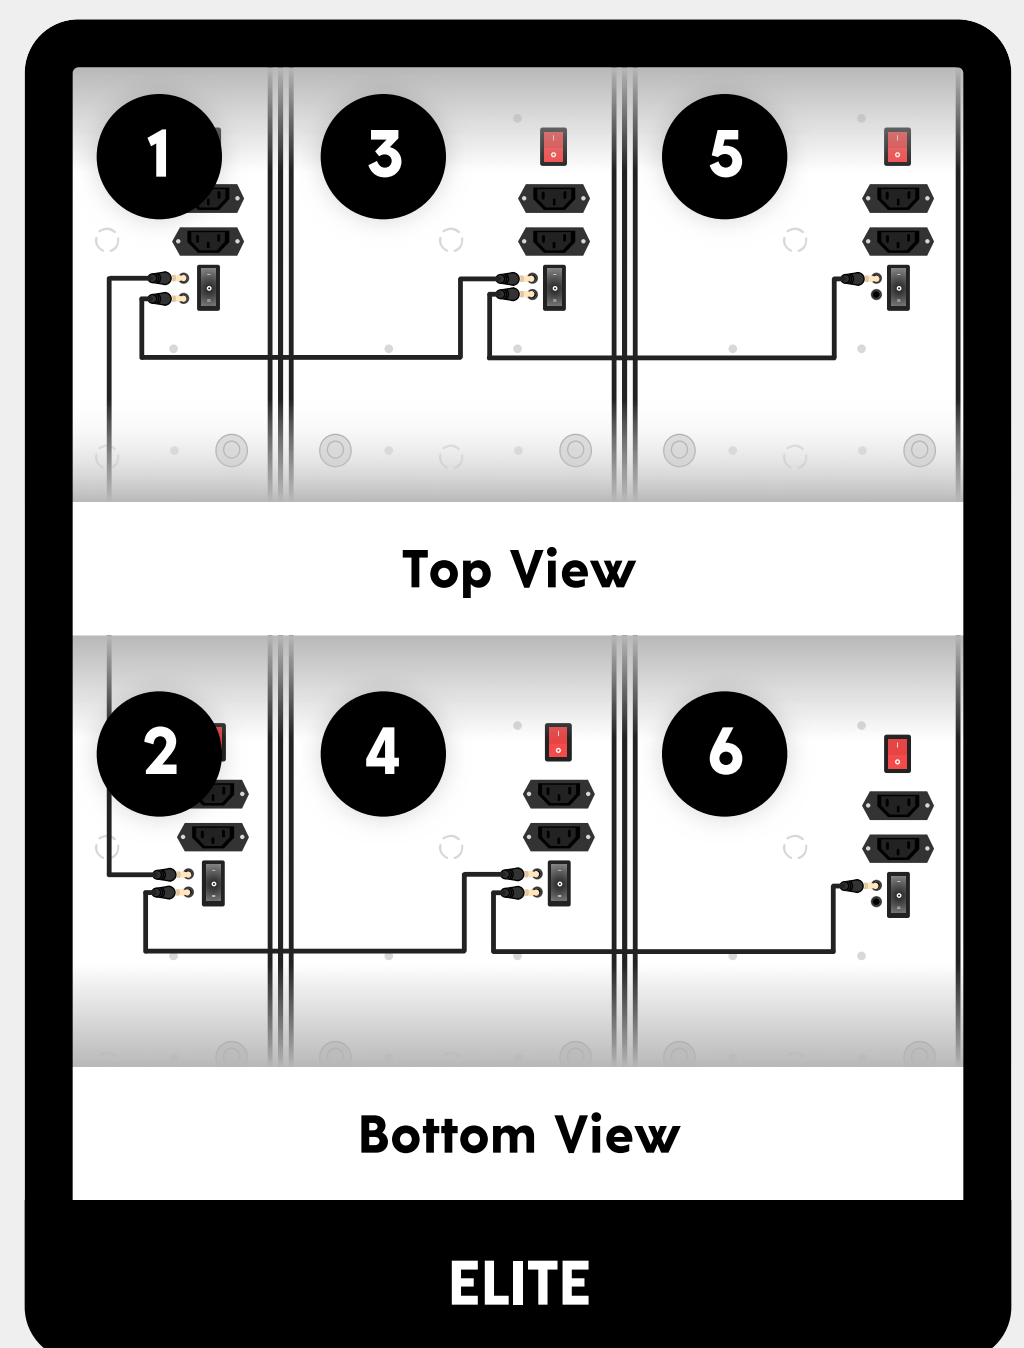

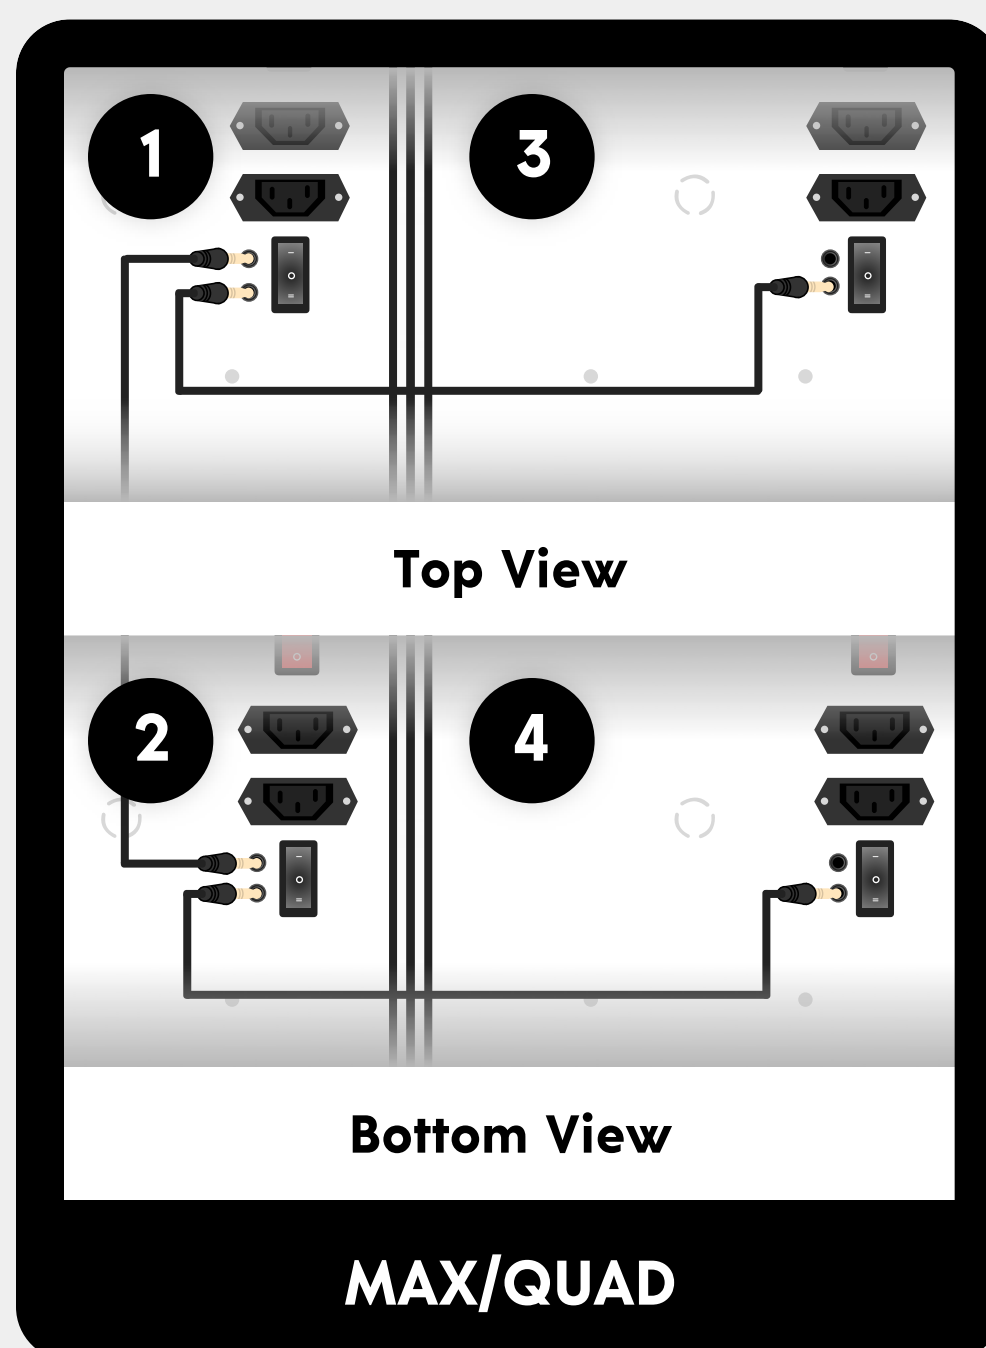

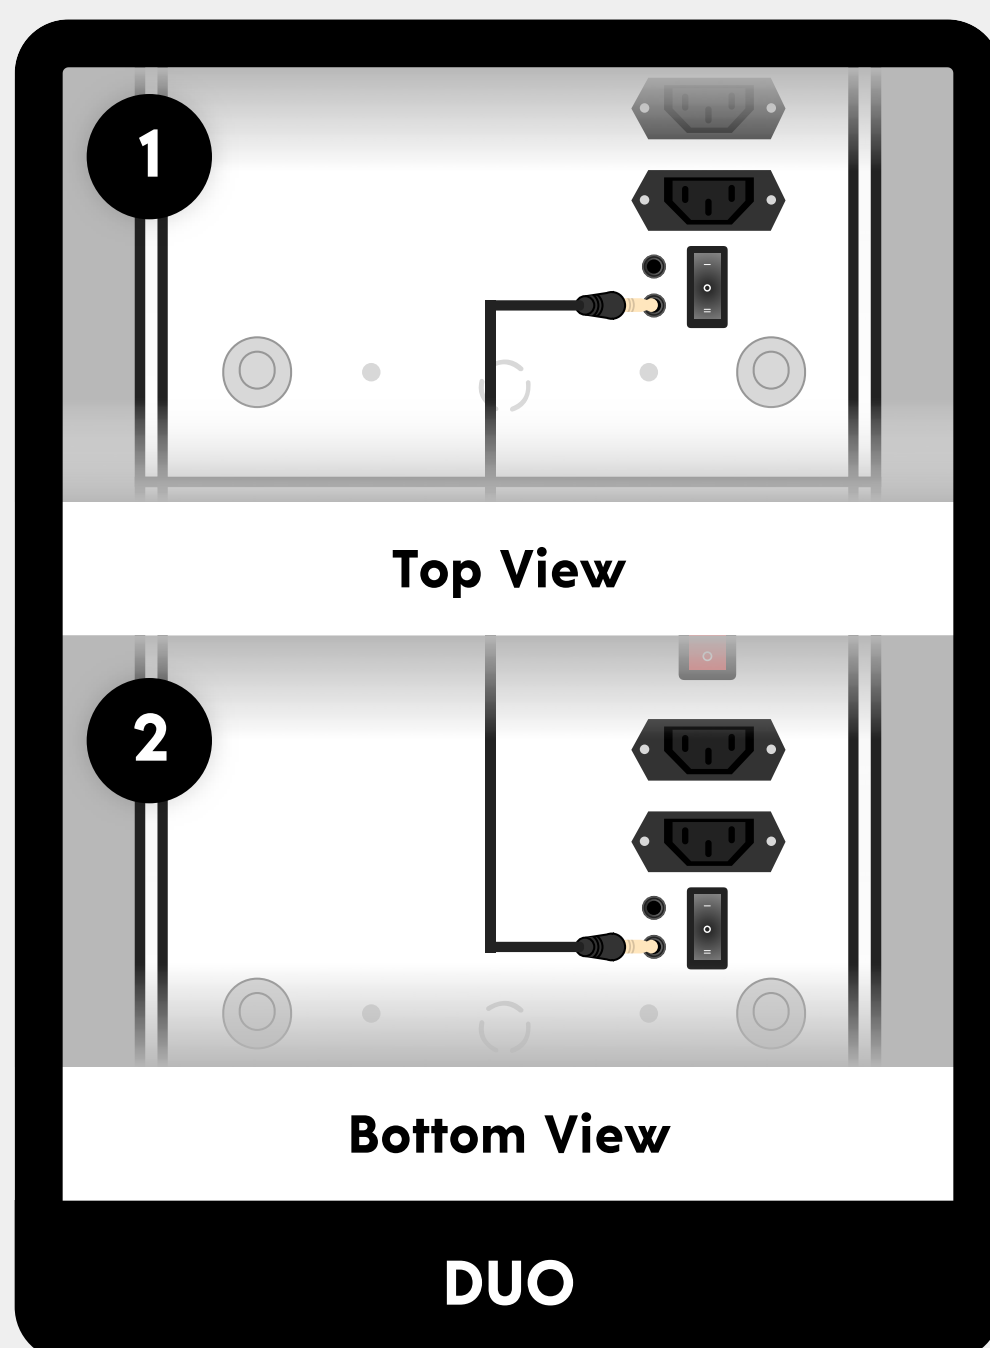

STEP 2

As shown in **Figure B**, there are two ports on each device that are interchangeable. Plug in the auxiliary cables, as shown in figures below. Your kit includes a total of 5 cables: 4 short cables to connect the devices horizontally, and one long cable to connect the devices vertically. Note: only the Elite system requires all 5 cables.

STEP 3

Plug in the power cords and turn the power switches to the on position for all the devices. They will pair automatically without using any Bluetooth signals. Any device can now control the rest of the connected devices.
