

6X10 AIR DEFENSE ADJUSTABLE RETURN NET

Our video instructions provide the best guidance for setting up your 6X10 Air Defense Adjustable Return Net. They can be viewed online at

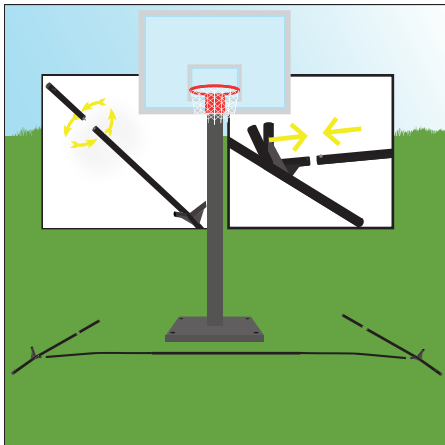

Please call us if you have any questions or concerns at **1-855-4RUKKET**
Please read our product safety warnings before setup

PRIOR TO EACH USE

Inspect the netting and frame for damage or wear. Make sure the frame and net are assembled correctly and on a flat surface, at least ten (10) feet away from structures and vehicles. Failure to follow these precautions could result in serious injury or damage to property.

INCLUDED EQUIPMENT

1) Screw the rear leg extenders onto the backs of the legs. Use the buttons on the center base bars to snap them together. Then, attach the assembled center base bar to the legs. The side base poles should be positioned so the straight and angled receiving holes are positioned up. The angled receiving hole should point towards the basketball goal.

2) Lay the net out flat in front of your basketball hoop so that the logos are facing up.

3) For the vertical barrier net orientation, insert lower fiberglass rod, with coupling tube on top, into vertical receiving hole. Repeat for other side.

4) For ball return net orientation, insert lower fiberglass rod, with coupling tube on top, into angled receiving hole. Repeat for other side

5) Thread the sleeves over the rods making sure that the black bungees are at the bottom.

6) Insert the fiberglass pole with metal knob on top into the fiberglass pole that is already attached to the base. Repeat for the other side.

7) With one of the upper corner white loops in hand, bend the side fiberglass pole down and inward by walking your hands, hand-over-hand style, up the pole as it is bending downward until you reach the top. Then attach the white corner loop to the metal knob and slowly let the fiberglass pole return back to an upright position. Repeat for the other side.

8) For the ball return net orientation, hook the black bungees onto the hooks on the front of the legs on each side. Pending height and design of your basketball hoop, it may be necessary for the top of the net to be positioned behind the backboard. This will not alter the performance of the product. Before practicing, take time to adjust the net as needed to achieve optimal ball return function for your specific basketball goal.

9) For the vertical barrier net orientation, hook the black bungee to the hook on the side of the base frame near the receiving holes. Be careful when fastening bungees to avoid any pinching or harm to your fingers.

WARNING

Please use adult supervision and follow the instructions when setting up and using this net. Regular use or abuse will eventually strain the netting and may break it. Do not stand behind the net. This net is not intended for personal protection. Failure to follow these precautions could result in serious injury or damage to property.
