

STANDARD 100 - OEKO-TEX®

The STANDARD 100 by OEKO-TEX® is a worldwide standardised, independent testing and certification system for textile raw, intermediate and end products in all processing stages as well as accessory materials used. The central endeavour is the development of testing criteria, limit values and test methods based on scientific findings. The basis is an extensive, stricter catalogue of measures with several hundred regulated individual substances. Discussions and developments classed as relevant are considered in updates to the STANDARD 100 by OEKO-TEX® requirements as soon as and as effectively as possible.

Test criteria and limit values go far beyond the valid national and international specifications. Extensive product checks and regular company audits also ensure a globally sustainable sensitisation of industry for the responsible handling of chemicals.

FAIRTRADE

The Textile Standard and the Textile Program are a comprehensive approach to empowering workers and improving wages and working conditions in the textile industry. Together with the Fairtrade Standard for cotton, Fairtrade reaches every step of the textile supply chain.

There are still many problems and challenges in the textile sector. This is influenced, among other things, by long, complex supply chains, lack of transparency and the lack of awareness among workers about their rights. The consequences for humans and the environment are often dramatic. With the Textile Program and the Textile Standard, Fairtrade is holistically committed to fair trade along the entire value chain of a fabric.
