

Magnitone is proven to increase local blood circulation

Study Objective

Evaluation of the efficacy of an Electric body and face cleansing brush using a home-use study with 20 volunteers. Volunteers were evaluated at 7, 14 and 28 days.

Number of volunteers: 20 females, 40 – 56 years old

Methodology

2 systems were used:

1. Subjective assessment by volunteers in a home-use study using a questionnaire.
2. Skin depth measurement by Primos® before and after 7, 14 and 28 days product use.

Results

85% of all panelists recognized a better blood circulation in their skin after the use of the cleansing brush for 7 days.

After 28 days of using Magnitone 100% of users felt they had better blood circulation.

100% of felt they had better blood circulation
