The Delphinium Cane

Supplies: blade, roller, CaneBenders cane benders available at TinyPandora.com Pandora Crafting Boutique, 3 blocks of polymer clay in the colors of your choice, a work surface, and a pasta machine, optional: a bottle or candle votive to cover with your cane.

Run each of your colors through your pasta machine on the thickest setting. Cut out each of your colors into 3 by 3 squares.

Then cut each of your 3 by 3 squares diagonally so that you get two triangles and put them back together to make one triangle. Put your triangles according to the picture above. You should end up with three skinner blends like shown.
Next take your purple and white skinner blend and roll it into a plug with the white in the middle. Then make that plug into a triangle.

Now with your purple and black skinner blend, roll that into a log with the purple on the inside and flatten with your roller. Also with your black and white skinner blend you want to make a fanfold cane with your white on the bottom and black on the top. In that black and white fanfold add a white channel with the second to last cane bender by Tiny Pandora Crafting Boutique. You also need to make a black and white striped cane and flatten it on your thickest setting in your pasta machine.

take the black and purple triangle plug that you flattened, and add a thin sheet of white around it, then put your purple triangle plug on top of that white sheet. Then put the striped cane on one side of your triangle. Place your skinner blend plug with the white channel and put it on the other side. It should look like the picture above.
Now reduce your cane and marry it together and repeat this step 4 times in total.

Here is the delphinium cane. Your cane should look similar, here I have covered a Coke bottle but you can cover what you please.
