

## Online Safety Management System

Effective workplace safety can only be delivered through an effective system.

The Safety Solutions Online Safety Management System puts safety first by making your safety system accessible from every computer and mobile device in your organisation.

The Safety Solutions Online Safety Management System (OSMS) is an end-to-end system that provides peace of mind to an organisation. Key benefits are:

- **Accessibility** - The OSMS is accessible from any device with an internet connection. If you have a computer on your desk or a phone in your pocket, your safety management system is with you.
- **Timeliness** - Always available means incidents are reported quickly, mobilising staff quickly. The shared calendar for inspections, audits and meetings improves coordination and saves time for staff.
- **Compliance** - The OSMS, when set up by a suitably qualified safety professional, will mean that you have a compliant system from day one. This satisfies not just your legal requirements but also opens up doors with clients requiring you to have an effective system in place.
- **Alerting** - The OSMS can be configured to send automatic alerts when an incident is reported. These alerts can be sent to both internal staff and externally, to Safety Solutions WA and others, allowing them to act quickly if required.
- **Updates** - Being an on-line system, software updates are automatic. More than this, you have peace of mind that your system will be kept up to date with improvements and legislative updates by Safety Solutions WA.
- **A Safe Investment** - Pricing is linked to the size of your company and includes an annual audit and 2 site inspections, starting at less than \$250 per month. As your organisation grows, the cost per person reduces. Safety Solutions can also provide full ongoing administration of your safety system if required.

**Safety Solutions WA** assists a wide variety of organisations towards achieving a workplace free from incident, harm, lost time, negative publicity or enforcement action. We do this by setting up and maintaining sound safety practices that meet your legislative requirements and positively impact your workplace.

Safety Solutions WA's goal is to support its clients in the full spectrum of their workplace safety. From establishing or reviewing your safety management system, to performing periodical audits, through to incident investigations and reporting, Safety Solutions WA are the people who can cover all your needs.
