

TRANSPARENT

CUSTOM / DIY Speaker Cables

High Performance 14-2 Speaker Cable

HP14-2 is an ideal speaker cable choice for basic home music and theater system installations where speaker cable runs are 40-feet or less. HP14-2 provides better than average performance in lengths greater than 40 feet; however, Transparent recommends using heavier gauged speaker cable such as HP12-2 or HP10-2 for speaker cable runs longer than 40 feet to avoid the possibility of resistive signal loss.

For a palpable increase in performance, connect HP 14-2 cables to the speakers with [Transparent 14-2 Brick Networks](#).

HOW TO ORDER: Every speaker cable package comes with a single length of cable. For example, selecting 20 feet in the length option menu results in ordering a single piece of cable that measures 20 feet. The single length gives you the opportunity to cut that cable into as many or as few pieces of cable in whatever lengths you like. If you want to make a 10 foot pair of speaker cables, order 20 feet from the length menu, and cut the length in half to create 2- 10 foot pieces. The kit comes with a complete termination kit for a pair of speaker cables. You can select your option for soldered or no solder connections and banana or spade terminations in the Term Kit option menu. Go to INWALL INSTALLATION SUPPLIES to buy additional termination supplies if you are planning on cutting the cable length you order in more than 2 pieces.

Features

- HP14-2's conductors are made with many heavy strands of tightly twisted OFHC copper for superior current transfer.
- Two 14 AWG conductors in a fire retardant, pressure-extruded outer jacket that reduces electro-mechanical vibration and preserves the intended electrical characteristics of the cable when flexed or bent.
- HP14-2 is available in continuous lengths from 10-100 feet.
- Use High Performance 14-2 Brick Networks to optimize the performance of this cable.
- See DIY Speaker Supplies for extra termination supplies and solderless connector options. HP14-2 is upgradeable to The Wall Premium or The Wall Reference Speaker Cable through an authorized Transparent dealer.

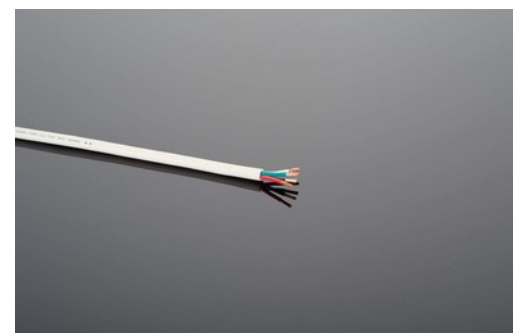

High Performance 14-4 Speaker Cable

HP14-4 is an ideal speaker cable choice for basic home music and theater system installations where speaker cable runs are 40-feet or less. HP14-4 provides better than average performance in lengths greater than 40 feet; however, Transparent recommends using heavier gauged speaker cable such as HP12-2 or HP10-2 for speaker cable runs longer than 40 feet to avoid the possibility of resistive signal loss.

For a palpable increase in performance, connect HP 14-4 cables to the speakers with [Transparent 14-2 Brick Networks](#).

HOW TO ORDER: Every speaker cable package comes with a single length of cable. For example, selecting 20 feet in the length option menu results in ordering a single piece of cable that measures 20 feet. The single length gives you the opportunity to cut that cable into as many or as few pieces of cable in whatever lengths you like. If you want to make a 10 foot pair of speaker cables, order 20 feet from the length menu, and cut the length in half to create 2- 10 foot pieces. The kit comes with a complete termination kit for a pair of speaker cables. You can select your option for soldered or no solder connections and banana or spade terminations in the Term Kit option menu. Go to INWALL INSTALLATION SUPPLIES to buy additional termination supplies if you are planning on cutting the cable length you order in more than 2 pieces.

High Performance 12-2 Speaker Cable

HP12-2 is an ideal speaker cable choice for better home music and theater system installations with moderately powered amplifiers at lengths up to 60 feet per channel. HP12-2 provides better than average performance in lengths greater than 60 feet; however, Transparent recommends using the heavier gauged HP 10-2 for speaker cable runs longer than 60 feet to avoid the possibility of resistive signal loss.

For a palpable increase in performance, connect the HP 12-2 cables to the speakers with [Transparent 12-2 Bricks](#). If your speakers each have 2 sets of red and black speaker terminals, use Transparent 12-2 Brick Biwire Networks to deliver your amplifier signal to both sets of speaker terminals.

HOW TO ORDER: Every speaker cable package comes with a single length of cable. For example, selecting 20 feet in the length option menu results in ordering a single piece of cable that measures 20 feet. The single length gives you the opportunity to cut that cable into as many or as few pieces of cable in whatever lengths you like. If you want to make a 10 foot pair of speaker cables, order 20 feet from the length menu, and cut the length in half to create 2- 10 foot pieces. You can select your option for soldered or no solder connections and banana or spade terminations in the Term Kit option menu. Go to INWALL INSTALLATION SUPPLIES to buy additional termination supplies if you are planning on cutting the cable length you order in more than 2 pieces.

Features

- HP12-2 has roughly double the number of heavy, tightly twisted OFHC copper strands per conductor when compared to HP 14-2 Speaker cable, thereby increasing its current carrying capability significantly.
- Two 12 AWG conductors in a fire retardant, pressure-extruded outer jacket that reduces electro-mechanical vibration and preserves the intended electrical characteristics of the cable when flexed or bent.
- HP12-2 is available in continuous lengths from 10-100 feet.
- If you have biwire speakers and you do not plan to add Brick Networks at this time, use Transparent Premium or Basic Biwire Adapters which provide far superior performance in biwire applications compared to the gold plated jumper plates that come with most biwire speakers. See [DIY Speaker Cable Accessories](#).
- Use High Performance 12-2 Brick Networks or 12-2 Brick Biwire Networks to optimize the performance of this cable.
- See [DIY Speaker Cable Accessories](#) for extra termination supplies and solderless connector options
- HP12-2 is upgradeable to The Wall Premium or The Wall Reference Speaker Cable through an authorized Transparent dealer.

High Performance 10-2 Speaker Cable

HP10-2 is an ideal speaker cable choice for better home music and theater system installations with moderately powered amplifiers at lengths up to 60 feet per channel, and it outperforms other 10 AWG speaker cable choices at lengths greater than 60 feet. Wherever possible, we recommend using HP10-2 rather than the smaller gauge alternatives: HP12-2 and HP 14-2. You can confirm here that High Performance 10 AWG Speaker Cable is the best choice for your installation.

For a palpable increase in performance, connect HP10-2 cables to the speakers with [Transparent 10-2 Bricks](#). If your speakers each have 2 sets of red and black speaker terminals, use Transparent 10-2 Brick Biwire Networks to deliver your amplifier signal to both sets of speaker terminals.

HOW TO ORDER: Every speaker cable package comes with a single length of cable. For example, selecting 20 feet in the length option menu results in ordering a single piece of cable that measures 20 feet. The single length gives you the opportunity to cut that cable into as many or as few pieces of cable in whatever lengths you like. If you want to make a 10 foot pair of speaker cables, order 20 feet from the length menu, and cut the length in half to create 2- 10 foot pieces. You can select your option for soldered or no solder connections and banana or spade terminations in the Term Kit option menu. Go to INWALL INSTALLATION SUPPLIES to buy additional termination supplies if you are planning on cutting the cable length you order in more than 2 pieces.

The Wall Premium

The Wall Premium has the same construction and stranding as some of the best high end speaker cables available. Fillers and pressure-extruded jackets hold uniformly twisted signal carrying members firmly in place to reduce noise. Use in conjunction with [The Brick Premium](#) to achieve true high-end performance at an affordable price. Go to [INWALL INSTALLATION SUPPLIES](#) to buy additional termination supplies if you are planning on cutting the cable length you order in more than 2 pieces.

Features

- The Wall Premium is a premium-level in-wall cable, featuring the same construction and stranding as some of the best high-end speaker cables available
- Two 10 AWG conductors in a fire retardant, pressure-extruded outer jacket that reduces electro-mechanical vibration and preserves the intended electrical characteristics of the cable when flexed or bent.
- Available in continuous lengths from 10-100 feet.
- If you have biwire speakers and you do not plan to add Brick Networks at this time, use Transparent Premium Biwire Adapters ;which provide far superior performance in biwire applications compared to the gold plated jumper plates that come with most biwire speakers.
- Use The Brick Premium Network to optimize the performance of this cable.
- See [DIY Speaker Cable Accessories](#) for extra termination supplies and solderless connector options.
- Upgradeable to The Wall Reference Speaker Cable through your Transparent dealer.

The Wall Reference

The Wall REFERENCE is a CL-approved version of Transparent REFERENCE Speaker Cable. The best inwall speaker cable on earth, its complex construction consists of no fewer than 18 different manufacturing operations with the best materials available. Quiet, dynamic, and musically balanced, it is capable of delivering all of the music. Designed for ultimate music and home entertainment systems that demand hidden installations, The Wall REFERENCE comes close to its true potential with The Brick REFERENCE and achieves the pinnacle of performance with The Brick XL.
