

RALI Swiss Hand Planes

- Extremely easy to use, set up, or adjust
- Change blades in less than 10 seconds - alignment is automatic
- Lifetime construction - virtually indestructible even with heavy use
- Instant fingertip control over blade depth using red lever at top of plane
- Unique laminated steel soles provide a perfectly flat and smooth base for life
- Throat opening is adjustable on most models using included key
- Back iron is easily adjusted with a roller — adapts to any job
- Swiss design and quality throughout

105 Pro Block Plane

A professional-quality block plane with a 105mm (4-1/8") precision-laminated steel sole, corrosion-resistant nickel or black sides, adjustable back plate, and

eccentric cam instant blade adjustment – a compact, parallel design to the 220 PRO. Very comfortable to hold, with exceptional heft for its size!

220 Pro Full-size Plane

A full-size professional-quality smoothing plane with a 220mm (8-5/8") precision-laminated steel sole, corrosion-resistant nickel or black sides,

adjustable throat opening and back plate, and replacement blade storage recess. Tracks easily. Ergonomic grips make the 220 a joy to use!

260L Pro Smoothing Plane

The 260 is the latest and largest addition to the RALI line, and offers unique advantages along with the longest bed (260mm, or 10") of any RALI plane. If you prefer the feel of a conventional plane together with the unique benefits of RALI design and quality, the 260 is your answer! With its extra length and weight, this smoothing plane eagerly welcomes its tasks, and leaves you with perfect results! Offering a design more similar to common planes, the 260 is also the only RALI to incorporate acceptance of a resharpenable blade as well as RALI's unique reversible and replaceable blades: the plane is supplied with one blade of each type. Replacement blades are the same 48 mm size used in the 220 and 105 models.

Bull Nose Plane

This handy plane enables you to create a smooth, even surface all the way into an inside corner. Manufactured using the same design and features as the RALI rabbeting planes, but with the blade edge positioned at the front, the B30N also uses the same quick-change, self-aligning 30 mm blades and fits comfortably into your hand for maximum ease and convenience. Blades can also be adjusted laterally for quick and easy rabbeting work. The body is nickel-plated, with a heavy laminated steel sole for optimal performance and heft. An essential tool for the serious cabinetmaker or furniture builder.

GO3L Universal Rabbeting Plane

A heavy-duty yet compact universal rabbeting plane with a 105mm (4-1/8") precision-laminated steel sole and blackened

steel sides plus unique RALI blade system. Ideal for site work. Optional fence available. Uses 30mm blades.

Full-size Rabbeting Plane

This top-of-the-line rabbeting plane is constructed with a heavy 245mm (9-5/8") laminated steel sole plate and smooth, nickel-plated sides. Its significant

length gives it great stability and smoothness in operation. Like its smaller cousin (the G03, with a 4" long bed), the G30N offers instant adjustment of blade depth through an integrated eccentric cam. Throat opening is also adjustable, and the quick-change 30 mm blades can be easily repositioned laterally for perfect corners on either side.

Thoughtful design also includes a convenient storage cavity for spare blades. Easy-adjust fence is included. Fence is same as optional on the G03L, and may be used on either plane. **The ultimate rabbeting plane for the serious shop!**

Ralimatic Hobby Plane

An affordable and compact, yet precise and durable hobby plane with unmatched operating ease and convenience. Use on all woods and

synthetic materials. Includes RALI single-lever depth control and quick change features.
