

**INSTRUCTIONS FOR SAFE USE & MAINTENANCE  
IMPORTANT – RETAIN FOR FUTURE REFERENCE - READ CAREFULLY**

**Important:**

Due to the weight of the horse it self it is important that you follow instructions **STEP 4 & STEP 5**. Weight of the horse will pull upright supports (columns) toward each other, that is why you should leave a little bit of play at one end of the crossmember so you can line up screws with predrilled holes at the other end. Once you have lined up screws its ok to tighten all of them up at both ends.

**!!!** Mane and tail are made out of synthetic polyester not a real hair and it is decorative element not designed to be brushed or pleat the braid. Hairs will pull out or get matted if will be kept playing with... **!!!**

**WARNING:** Following use of the rocking hose, regularly check that all of the screws are sufficiently tightened.
