

Tulips!

In the  fall,  my  dad and I  planted  tulips in our  yard.

The  tulips  looked like  onions when  when we  planted them.

We had to put a big rock

ontop of each one, so that the squirrels

didn't

dig

them up.

When

the

snow

melted

we

removed

the

rocks.

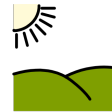

The stems

and

leaves

came out of the

ground

first.

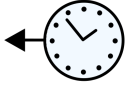

Then the flowers came out.

Some

of them

were

bitten

off by the

squirrels.

They

didn't eat

them.

They

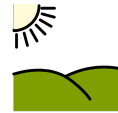

bit

them off and left them

on

the

ground.

Maybe

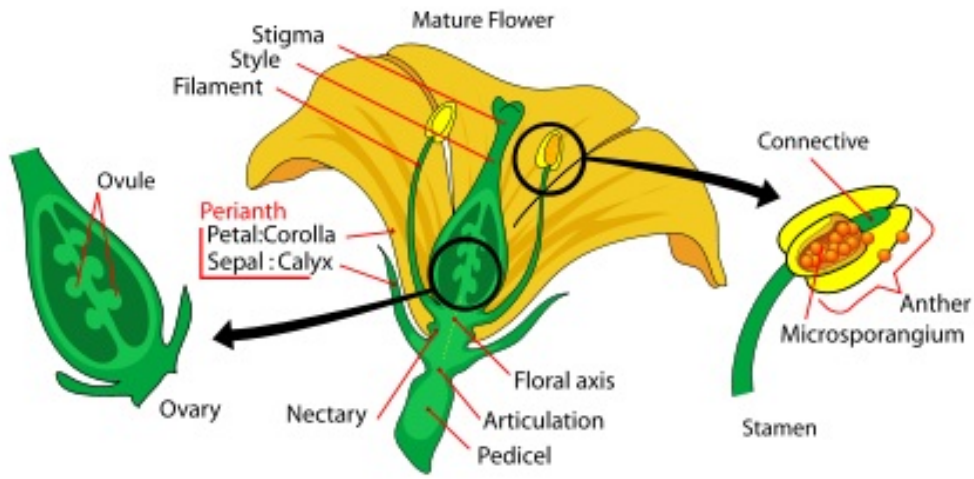

they

didn't like

the

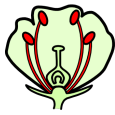

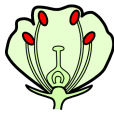

taste?

 Inside the flower are stamen.

 The little bulges at the top of the stamen are called the anther.

 This is where the pollen is. The pollen is what the bees

 like.

When

lots

of

bees

start coming to our

yard,

that's

when

I know

spring

is really here.

And also

my

dad

starts

talking about

baseball

all the

time!

My

dad

likes

tulips

but he

loves

baseball!
