

# Indoor Plant Care

## 1 Temperature

Bring plants inside before temps hit 45F or 7C

## 2 Pests

Check plants for pests and use insecticidal soap or spray with water before bringing inside

## 3 Shaded Acclimation

Before moving inside move to a shaded area outside to acclimate to less light

## 4 Less Water

Make sure to water enough to keep from drying out but cut back in the winter

## 5 Light Humidity

Consider a growing light on winter to combat less light and add a humidifier or mist leaves through winter

## 6 Water Schedule

Create a water schedule based on the type of plant and soil but dont overwater

## 7 Reduce Feeding

Add an occasional water soluble fertilizer and increase again in spring

## 8 Bath Time

Use lukewarm water in the shower for 5 10 minutes and let them sit in the humidity
