WAX SEAL STICKERS RECIPE

First things first: If you like a more perfect or clean look, if you will, to your wax seals, then I suggest using a silicone mat with the cavities already built in. If you prefer freehand then using a small flat silicone mat works too.

What You Can Use:

Wax Sticks
Wax Seal Stamps
Dual Temperature Glue Gun
Silicone Mat
Adhesive Sticker Dots

How to Make Them:

- Once plugged in, I chose the high temperature setting of the glue gun to warm up the wax stick that's inserted.

- Test a very small amount of wax on a silicone mat to check how runny it is. (we don't want the wax to be too runny- this will make a mess) and switch the glue gun to the low temperature setting.

- Start to push the wax stick through onto your silicone mat leaving enough space for wax to spread. we are making the wax seals one at a time, so place your glue gun in a safe setting.

- Using your desired wax seal stamp, apply very light pressure and stamp away. Repeat previous steps for the desired amount of wax seals you would like.

- Once wax has cooled, **can take up to one or 2 minutes, just to be safe ** remove the wax seal stamp to reveal the beautiful design.

- Peel off the backing of adhesive dot and stick to the back of your wax seal and voila! You have yourself a Wax Seal Sticker
