Planting Hugger

- Add about 1 cup of potting soil to your empty Hugger
- Place plant over soil after having loosened its roots
- Keep adding dirt until just below the planter's rim
- Pat down gently but firmly to ensure your plant has a good hold
- Add plenty of water and continue to do so over the following few days to help the plant establish itself

Installing Hugger

- Decide on the location of your Hugger(s) along your downspout(s) and remember to pick a height that allows for easy watering
- Gently push Hugger unto rain pipe and hold it with one hand
- Put the fastening strap into place by inserting one end in one of the pot's notches, wrapping it around the downspout and then inserting the other end into the notch on the opposite side
- Fasten as tightly as possible
- The snug fit and the customized back of Hugger will prevent it from sliding down
