

GreenPinkies Felt Wall Planter

To make the most out of your vertical planter please follow the steps below:

1. Before hanging your wall planter, whether inside or outside, make sure your plants will get the appropriate amount of (sun)light they need to thrive.

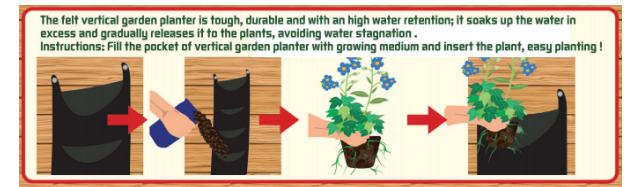

2. If you have a black wall planter, please don't hang it in direct sunlight, because the soil and roots will overheat!

3. Hang the wall planter with the hardware provided. The hardware provided works best with concrete/cinder block walls. You can also use zip ties or metal hooks for other locations like railings.

Be sure to check your hardware is appropriate for the space where you are planning to hang the wall planter.

4. Use the provided root wrapper for easy planting. Put a small amount of soil in your planter and wrap your plant in the enclosed felt root wrapper and place it in your wall planter.

5. Water your plant as needed, but make sure not to overwater. If felt bag leaks, you put a bit too much water in it! to avoid overwatering and leakages

6. Enjoy your new decorative and space saving wall planter!

We thank you for your purchase!
