1. Unscrew drip tip from cartomizer.

2. Hold Cartomizer at a slight angle. Gently tip your e-liquid bottle* against side opening of cartomizer. Slowly begin dripping liquid down interior wall of cartomizer. DO NOT get any of liquid in the center hole. Only fill the surrounding chamber.

3. Fill cartomizer to uppermost fill line. Be careful not to over fill or you run the risk of inhaling E-Liquid along with your vapor during the first few puffs. When getting low (never let cartomizer dry out unless changing flavors) simply refill your e-juice.

* E-Liquid bottles come with both blunt needle and rounded drip tips.
