

ProDuster microfiber sleeves quickly and easily remove dust from nearly all surfaces. Dusty, cluttered desks, blinds, computers, electronic equipment and even plants are no match for the dust pulling power of the ProDuster.

ProDuster sleeves fit over most wand dusters and generate their own dust-attracting properties that collect and hold dust and dirt particles.

The sleeves are safe for any surface as they contain no oils or waxes and won't streak or leave any residue.

ProDuster sleeves will prolong the life of your wool duster, making them much more economical to replace than the entire duster.

Dust around any shaped objects

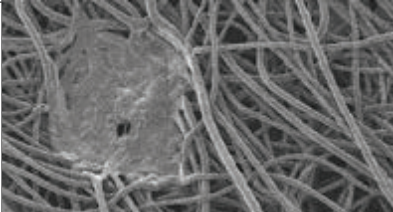

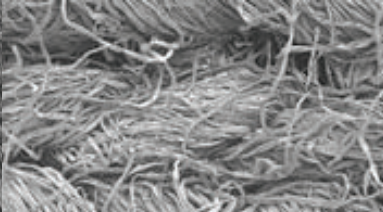

Dust cluttered desks, blinds and computers

Safe for any surface, contains no oils or waxes

ProDuster

Cotton Dust Cloth

	ProDuster	Cotton Dust Cloth
Dust Collection	Self generating attractive properties attract dust	No dust attracting properties
Fiber Size	Small fiber size, 10-50 micrometers 3x smaller than human hair	Woven thread size is over 200 micrometers, larger than human hair
Cloth Surfaces	Non-woven surface leaves many open microscopic spaces to trap and hold dust	Weak cotton fiber requires a tight weave that leaves limited open space to hold dust
Microscopic Images of Cloths (500 micrometers)		

- ProDusters are made from dense, polypropylene cluster fibers with dust-attracting properties designed to attract and trap dust, dirt and hair, instead of stirring them up into the breathable air.
- The synthetic microfibers are far smaller in diameter than typical fibers and are porous. The tiny pores work like magnets, working close to all surfaces and pulling in and trapping dust and dirt particles.
