# Special Care Notes

## Special Flower Care Notes for Items Specific to this Package

- **Garden roses:** Juliet garden roses tend to be more delicate than standard roses, so be sure to give them their own vase! Feel free to use the blow dryer, with the heating element OFF, to help blow them open if they do not start to open within a day or so.
- **Reflex Roses and Lisianthus:** We adore reflexing roses and lisianthus! It's a baller florist move that gives you more bang for your buck! [Check out how to reflex on this page.](#)
- **Ranunculus:** Have 22 gauge straight floral wire on hand in case your ranunculus are heavily curved and bending under their own weight. [Learn how to wire ranunculus on this page.](#)
- **Tweedia:** This is a more delicate flower that needs to be in its own vase, in a cool location. The leaves are often chew and unattractive, and when pinched off seeps a sticky, milky sap. This is normal but a good reason to give the flowers their own vase before designing.
- **Bug Nibbles:** Remember that you are working with unprocessed greenery, so you may find some leaves that have been munched. Just snip those away! Nibbles are typically found on seeded eucalyptus and salal.
- **Eucalyptus:** Seeded eucalyptus is off crop and unavailable late March-June. Gunni eucalyptus typically has tender growth on ends that shrivel and can be snipped or pinched off. This is normal and to be expected with greenery.
